Schneider
 **Electric**

The information provided in this documentation contains general descriptions and/or technical characteristics of the performance of the products contained herein. This documentation is not intended as a substitute for and is not to be used for determining suitability or reliability of these products for specific user applications. It is the duty of any such user or integrator to perform the appropriate and complete risk analysis, evaluation and testing of the products with respect to the relevant specific application or use thereof. Neither Schneider Electric nor any of its affiliates or subsidiaries shall be responsible or liable for misuse of the information contained herein. If you have any suggestions for improvements or amendments or have found errors in this publication, please notify us.

You agree not to reproduce, other than for your own personal, noncommercial use, all or part of this document on any medium whatsoever without permission of Schneider Electric, given in writing. You also agree not to establish any hypertext links to this document or its content.

Schneider Electric does not grant any right or license for the personal and noncommercial use of the document or its content, except for a non-exclusive license to consult it on an "as is" basis, at your own risk. All other rights are reserved.

All pertinent state, regional, and local safety regulations must be observed when installing and using this product. For reasons of safety and to help ensure compliance with documented system data, only the manufacturer should perform repairs to components.

When devices are used for applications with technical safety requirements, the relevant instructions must be followed.

Failure to use Schneider Electric software or approved software with our hardware products may result in injury, harm, or improper operating results.

Failure to observe this information can result in injury or equipment damage.

Safety Information

Important Information

NOTICE

Read these instructions carefully, and look at the equipment to become familiar with the device before trying to install, operate, service, or maintain it. The following special messages may appear throughout this documentation or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of this symbol to a “Danger” or “Warning” safety label indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

! DANGER

DANGER indicates a hazardous situation which, if not avoided, **will result in** death or serious injury.

! WARNING

WARNING indicates a hazardous situation which, if not avoided, **could result in** death or serious injury.

! CAUTION

CAUTION indicates a hazardous situation which, if not avoided, **could result in** minor or moderate injury.

NOTICE

NOTICE is used to address practices not related to physical injury.

PLEASE NOTE

Electrical equipment should be installed, operated, serviced, and maintained only by qualified personnel. No responsibility is assumed by Schneider Electric for any consequences arising out of the use of this material.

A qualified person is one who has skills and knowledge related to the construction and operation of electrical equipment and its installation, and has received safety training to recognize and avoid the hazards involved.

BEFORE YOU BEGIN

Do not use this product on machinery lacking effective point-of-operation guarding. Lack of effective point-of-operation guarding on a machine can result in serious injury to the operator of that machine.

WARNING

UNGUARDED EQUIPMENT

- Do not use this software and related automation equipment on equipment which does not have point-of-operation protection.
- Do not reach into machinery during operation.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

This automation equipment and related software is used to control a variety of industrial processes. The type or model of automation equipment suitable for each application will vary depending on factors such as the control function required, degree of protection required, production methods, unusual conditions, government regulations, etc. In some applications, more than one processor may be required, as when backup redundancy is needed.

Only you, the user, machine builder or system integrator can be aware of all the conditions and factors present during setup, operation, and maintenance of the machine and, therefore, can determine the automation equipment and the related safeties and interlocks which can be properly used. When selecting automation and control equipment and related software for a particular application, you should refer to the applicable local and national standards and regulations. The National Safety Council's Accident Prevention Manual (nationally recognized in the United States of America) also provides much useful information.

In some applications, such as packaging machinery, additional operator protection such as point-of-operation guarding must be provided. This is necessary if the operator's hands and other parts of the body are free to enter the pinch points or other hazardous areas and serious injury can occur. Software products alone cannot protect an operator from injury. For this reason, the software cannot be substituted for or take the place of point-of-operation protection.

Ensure that appropriate safeties and mechanical/electrical interlocks related to point-of-operation protection have been installed and are operational before placing the equipment into service. All interlocks and safeties related to point-of-operation protection must be coordinated with the related automation equipment and software programming.

NOTE: Coordination of safeties and mechanical/electrical interlocks for point-of-operation protection is outside the scope of the Function Block Library, System User Guide, or other implementation referenced in this documentation.

START-UP AND TEST

Before using electrical control and automation equipment for regular operation after installation, the system should be given a start-up test by qualified personnel to verify correct operation of the equipment. It is important that arrangements for such a check be made and that enough time is allowed to perform complete and satisfactory testing.

WARNING

EQUIPMENT OPERATION HAZARD

- Verify that all installation and setup procedures have been completed.
- Before operational tests are performed, remove all blocks or other temporary holding means used for shipment from all component devices.
- Remove tools, meters, and debris from equipment.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Follow all start-up tests recommended in the equipment documentation. Store all equipment documentation for future references.

Software testing must be done in both simulated and real environments.

Verify that the completed system is free from all short circuits and temporary grounds that are not installed according to local regulations (according to the National Electrical Code in the U.S.A, for instance). If high-potential voltage testing is necessary, follow recommendations in equipment documentation to prevent accidental equipment damage.

Before energizing equipment:

- Remove tools, meters, and debris from equipment.
- Close the equipment enclosure door.
- Remove all temporary grounds from incoming power lines.
- Perform all start-up tests recommended by the manufacturer.

OPERATION AND ADJUSTMENTS

The following precautions are from the NEMA Standards Publication ICS 7.1-1995 (English version prevails):

- Regardless of the care exercised in the design and manufacture of equipment or in the selection and ratings of components, there are hazards that can be encountered if such equipment is improperly operated.
- It is sometimes possible to misadjust the equipment and thus produce unsatisfactory or unsafe operation. Always use the manufacturer's instructions as a guide for functional adjustments. Personnel who have access to these adjustments should be familiar with the equipment manufacturer's instructions and the machinery used with the electrical equipment.
- Only those operational adjustments required by the operator should be accessible to the operator. Access to other controls should be restricted to prevent unauthorized changes in operating characteristics.

About the Book

At a Glance

Document Scope

The present document details the various elements of the Script Engine. Read the complete document before you use the product or products described herein.

Validity Note

The information contained in the present document is applicable only for EcoStruxure Machine Expert. This document has been updated for the release of EcoStruxure Machine Expert V1.0.

The technical characteristics of the devices described in this document also appear online. To access this information online:

Step	Action
1	Go to the Schneider Electric home page www.schneider-electric.com .
2	In the Search box type the reference of a product or the name of a product range. <ul style="list-style-type: none">• Do not include blank spaces in the reference or product range.• To get information on grouping similar modules, use asterisks (*).
3	If you entered a reference, go to the Product Datasheets search results and click on the reference that interests you. If you entered the name of a product range, go to the Product Ranges search results and click on the product range that interests you.
4	If more than one reference appears in the Products search results, click on the reference that interests you.
5	Depending on the size of your screen, you may need to scroll down to see the data sheet.
6	To save or print a data sheet as a .pdf file, click Download XXX product datasheet .

The characteristics that are presented in the present document should be the same as those characteristics that appear online. In line with our policy of constant improvement, we may revise content over time to improve clarity and accuracy. If you see a difference between the document and online information, use the online information as your reference.

Product Related Information

WARNING

LOSS OF CONTROL

- The designer of any control scheme must consider the potential failure modes of control paths and, for certain critical control functions, provide a means to achieve a safe state during and after a path failure. Examples of critical control functions are emergency stop and overtravel stop, power outage and restart.
- Separate or redundant control paths must be provided for critical control functions.
- System control paths may include communication links. Consideration must be given to the implications of unanticipated transmission delays or failures of the link.
- Observe all accident prevention regulations and local safety guidelines.¹
- Each implementation of this equipment must be individually and thoroughly tested for proper operation before being placed into service.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

¹ For additional information, refer to NEMA ICS 1.1 (latest edition), "Safety Guidelines for the Application, Installation, and Maintenance of Solid State Control" and to NEMA ICS 7.1 (latest edition), "Safety Standards for Construction and Guide for Selection, Installation and Operation of Adjustable-Speed Drive Systems" or their equivalent governing your location.

WARNING

UNINTENDED EQUIPMENT OPERATION

- Only use software approved by Schneider Electric for use with this equipment.
- Update your application program every time you change the physical hardware configuration.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

 **WARNING**

UNINTENDED EQUIPMENT OPERATION

Do not include any programming or configuration logic, or parameter values from any of the examples in your machine or process without thoroughly testing your entire application.

Failure to follow these instructions can result in death, serious injury, or equipment damage.

Terminology Derived from Standards

The technical terms, terminology, symbols and the corresponding descriptions in this manual, or that appear in or on the products themselves, are generally derived from the terms or definitions of international standards.

In the area of functional safety systems, drives and general automation, this may include, but is not limited to, terms such as *safety*, *safety function*, *safe state*, *fault*, *fault reset*, *malfunction*, *failure*, *error*, *error message*, *dangerous*, etc.

Among others, these standards include:

Standard	Description
IEC 61131-2:2007	Programmable controllers, part 2: Equipment requirements and tests.
ISO 13849-1:2015	Safety of machinery: Safety related parts of control systems. General principles for design.
EN 61496-1:2013	Safety of machinery: Electro-sensitive protective equipment. Part 1: General requirements and tests.
ISO 12100:2010	Safety of machinery - General principles for design - Risk assessment and risk reduction
EN 60204-1:2006	Safety of machinery - Electrical equipment of machines - Part 1: General requirements
ISO 14119:2013	Safety of machinery - Interlocking devices associated with guards - Principles for design and selection
ISO 13850:2015	Safety of machinery - Emergency stop - Principles for design
IEC 62061:2015	Safety of machinery - Functional safety of safety-related electrical, electronic, and electronic programmable control systems
IEC 61508-1:2010	Functional safety of electrical/electronic/programmable electronic safety-related systems: General requirements.
IEC 61508-2:2010	Functional safety of electrical/electronic/programmable electronic safety-related systems: Requirements for electrical/electronic/programmable electronic safety-related systems.

IEC 61508-3:2010	Functional safety of electrical/electronic/programmable electronic safety-related systems: Software requirements.
IEC 61784-3:2016	Industrial communication networks - Profiles - Part 3: Functional safety fieldbuses - General rules and profile definitions.
2006/42/EC	Machinery Directive
2014/30/EU	Electromagnetic Compatibility Directive
2014/35/EU	Low Voltage Directive

In addition, terms used in the present document may tangentially be used as they are derived from other standards such as:

Standard	Description
IEC 60034 series	Rotating electrical machines
IEC 61800 series	Adjustable speed electrical power drive systems
IEC 61158 series	Digital data communications for measurement and control – Fieldbus for use in industrial control systems

Finally, the term zone of operation may be used in conjunction with the description of specific hazards, and is defined as it is for a hazard zone or danger zone in the Machinery Directive (2006/42/EC) and ISO 12100:2010.

NOTE: The aforementioned standards may or may not apply to the specific products cited in the present documentation. For more information concerning the individual standards applicable to the products described herein, see the characteristics tables for those product references.

Chapter 1

SchneiderElectric.Scripting.CodeAnalysis Namespace

This namespace contains types and methods that support accessing and using Code Analysis functionality from within the Python API.

Interfaces

Interface	Description
IConventionsTableResults	Scripting API with code analysis results of convention table.
IMetricsTableResults	Scripting API with code analysis results of metrics table.
IScriptAnalysisProject	Scripting API for Machine Advisor Code Analysis with details of analysis project on cloud.
IScriptApplicationExtension	Scripting API to extend the application script object for Code Analysis operation access (for this application).
IScriptCloudConfiguration	Scripting API for cloud connector configuration.
IScriptCloudConnector Interface	Scripting API for cloud connector.
IScriptCodeAnalysis	Interface that describes the script engine of code analysis
IScriptCompany	Scripting API for Machine Advisor Code Analysis with details of company.
IScriptConfiguration	Scripting API to configure the code analysis query engine and code analyser.
IScriptConventions	Scripting API to build convention table results.

IScriptConventionsObject	Scripting API attached to conventions table objects.
IScriptCreateBlockListExtension	Scripting API to extend an object for code analysis block list creation.
IScriptCreateConventionsTableExtension	Scripting API to extend an object for code analysis conventions table creation.
IScriptCreateDependencyViewExtension	Scripting API to extend an object for code analysis dependency view creation.
IScriptCreateManagerObjectExtension	Scripting API to extend an object for code analysis manager object creation.
IScriptCreateMetricsTableExtension	Scripting API to extend an object for code analysis metrics table creation.
IScriptMetrics	Scripting API to build metrics table results.
IScriptMetricsObject	Scripting API attached to metrics table objects.
IScriptPortal	Scripting API for Machine Advisor Code Analysis cloud portal.
IScriptProjectExtension	Scripting API to extend the project script object for Code Analysis operation access (for POU space)
IScriptQueries	Scripting API for Machine Advisor Code Analysis queries.
IScriptQuery	Scripting API of a query object.
IScriptQueryChain	Scripting API of a query chain object.
IScriptQueryParameter	Scripting API of a query parameter object
IScriptQueryRepository	Scripting API to access all query chains.

» IScriptSnapshotOptions	Scripting API for Machine Advisor Code Analysis snapshot options.
» IScriptSnapshots	Scripting API for Machine Advisor Code Analysis snapshots.

Enumerations

	Enumeration	Description
	HttpBackendTypes Enumeration	The available and supported Http Backend types
	TripleStorageBackendTypes	Definition of strategy used for backend type selection.

IConventionsTableResults Interface

Scripting API with code analysis results of convention table.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IConventionsTableResults
```

The **IConventionsTableResults** type exposes the following members.

Properties

Name	Description
 analyser_version	Retrieves the analyser version.
 analysis_finished_at	Retrieves the analysis finished time.
 analysis_started_at	Retrieves the analysis start time.
 columns	Retrieves the analysis results columns.
 message	Retrieves the final analysis message (as text).
 project_path	Retrieves the analyzed project path.
 rows	Retrieves the analysis results rows.
 successful	Retrieves a value indicating whether this IConventionsTableResults was successful.

Methods

Name	Description
 IConventionsTableResults.store_as_csv Method	Stores the analysis results as xml.

	<u>IConventionsTableResults.store_as_html Method</u>	Stores the analysis results as html.
	<u>IConventionsTableResults.store_as_xml Method</u>	Stores the analysis results as xml.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IConventionsTableResults.IConventionsTableResults Properties

The [IConventionsTableResults](#) type exposes the following members.

Properties

Name	Description
 IConventionsTableResults.analyser_version Property	Retrieves the analyser version.
 IConventionsTableResults.analysis_finished_at Property	Retrieves the analysis finished time.
 IConventionsTableResults.analysis_started_at Property	Retrieves the analysis start time.
 IConventionsTableResults.columns Property	Retrieves the analysis results columns.
 IConventionsTableResults.message Property	Retrieves the final analysis message (as text).
 IConventionsTableResults.project_path Property	Retrieves the analyzed project path.
 IConventionsTableResults.rows Property	Retrieves the analysis results rows.
 IConventionsTableResults.successful Property	Retrieves a value indicating whether this IConventionsTableResults was successful.

IConventionsTableResults.IConventionsTableResults Methods

The [IConventionsTableResults](#) type exposes the following members.

Methods

	Name	Description
	store_as_csv	Stores the analysis results as csv.
	store_as_html	Stores the analysis results as html.
	store_as_xml	Stores the analysis results as xml.

See Also

[*IConventionsTableResults Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IConventionsTableResults.store_as_csv Method

Stores the analysis results as csv.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void store_as_csv(  
    string filename  
)
```

Parameters

filename

Type: [System.String](#)

The filename for analysis results.

See Also

[*IConventionsTableResults Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IConventionsTableResults.store_as_html Method

Stores the analysis results as html.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void store_as_html(
    string filename,
    string xsltTransformationFilename = null
)
```

Parameters

filename

Type: [System.String](#)

The filename for analysis results.

xsltTransformationFilename (Optional)

Type: [System.String](#)

The XSLT transformation filename. If null, the default transformation file is used.

See Also

[IConventionsTableResults Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IConventionsTableResults.store_as_xml Method

Stores the analysis results as xml.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void store_as_xml (
    string filename
)
```

Parameters

filename

Type: [System.String](#)

The filename for analysis results.

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string[][] rows { get; }
```

Property Value

Type: [String\[\]\[\]](#)

The analysis results rows.

See Also

[*IMetricsTableResults Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IMetricsTableResults.successful Property

Retrieves a value indicating whether this [IMetricsTableResults](#) was successful.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin
(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool successful { get; }
```

Property Value

Type: [Boolean](#)

`true` if successful; otherwise, `false`.

See Also

[IMetricsTableResults Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IMetricsTableResults.IMetricsTableResults Methods

The [IMetricsTableResults](#) type exposes the following members.

Methods

	Name	Description
	store_as_csv	Stores the analysis results as csv.
	store_as_html	Stores the analysis results as html.
	store_as_xml	Stores the analysis results as xml.

See Also

[IMetricsTableResults Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IMetricsTableResults.store_as_csv Method

Stores the analysis results as csv.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void store_as_csv(  
    string filename  
)
```

Parameters

filename

Type: [System.String](#)

The filename for analysis results.

See Also

[IMetricsTableResults Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IMetricsTableResults.store_as_html Method

Stores the analysis results as html.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void store_as_html(
    string filename,
    string xsltTransformationFilename = null
)
```

Parameters

filename

Type: [System.String](#)

The filename for analysis results.

xsltTransformationFilename (Optional)

Type: [System.String](#)

The XSLT transformation filename. If null, the default transformation file is used.

See Also

[IMetricsTableResults Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IMetricsTableResults.store_as_xml Method

Stores the analysis results as xml.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void store_as_xml(  
    string filename  
)
```

Parameters

filename

Type: [System.String](#)

The filename for analysis results.

See Also

[IMetricsTableResults Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptAnalysisProject Interface

Scripting API for Machine Advisor Code Analysis with details of analysis project on cloud.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptAnalysisProject
```

The **IScriptAnalysisProject** type exposes the following members.

Properties

	Name	Description
	IScriptAnalysisProject.description Property	Retrieves the description.
	IScriptAnalysisProject.id Property	Retrieves the identifier.
	IScriptAnalysisProject.name Property	Retrieves the name.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptAnalysisProject.IScriptAnalysisProject Properties

The [IScriptAnalysisProject](#) type exposes the following members.

Properties

	Name	Description
	description	Retrieves the description.
	id	Retrieves the identifier.
	name	Retrieves the name.

See Also

[IScriptAnalysisProject Interface](#)

[Chapter 1 SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

[*IScriptAnalysisProject.description*](#) Property

Retrieves the description.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string description { get; }
```

Property Value

Type: [String](#)

The description.

See Also

[*IScriptAnalysisProject Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptAnalysisProject.id Property

Retrieves the identifier.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
Guid id { get; }
```

Property Value

Type: [Guid](#)

The identifier.

See Also

[*IScriptAnalysisProject Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptAnalysisProject.name Property

Retrieves the name.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string name { get; }
```

Property Value

Type: [String](#)

The name.

See Also

[*IScriptAnalysisProject Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptApplicationExtension Interface

Scripting API to extend the application script object for Code Analysis operation access (for this application).

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin
(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptApplicationExtension
```

The **IScriptApplicationExtension** type exposes the following members.

Properties

	Name	Description
	code_analysis	Access to code_analysis scripting API.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptApplicationExtension.IScriptApplicationExtension Properties

The [IScriptApplicationExtension](#) type exposes the following members.

Properties

	Name	Description
	IScriptApplicationExtension.code_analysis Property	Access to code_analysis scripting API.

See Also

[IScriptApplicationExtension Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptApplicationExtension.code_analysis Property

Access to code_analysis scripting API.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptCodeAnalysis code_analysis { get; }
```

Property Value

Type: [IScriptCodeAnalysis](#)

The code_analysis scripting API.

See Also

[*IScriptApplicationExtension Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptCloudConfiguration Interface

Scripting API for cloud connector configuration.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptCloudConfiguration
```

The **IScriptCloudConfiguration** type exposes the following members.

Properties

Name	Description
 IScriptCloudConfiguration.data_endpoint Property	Retrieves the data endpoint.
 IScriptCloudConfiguration.dataset Property	Retrieves or sets the dataset name.
 IScriptCloudConfiguration.http_backend_type Property	Retrieves or sets the triple storage http backend type.
 IScriptCloudConfiguration.max_upload_triple_count_per_request Property	Retrieves or sets the maximum upload triple count per request.

	IScriptCloudConfiguration.query_endpoint Property	Retrieves the query endpoint. Will be combined with server Uri.
	IScriptCloudConfiguration.relative_data_endpoint Property	Retrieves or sets the data endpoint.
	IScriptCloudConfiguration.relative_query_endpoint Property	Retrieves or sets the query endpoint. Will be combined with server UUriL.
	IScriptCloudConfiguration.relative_sparql_endpoint Property	Retrieves or sets the data endpoint.
	IScriptCloudConfiguration.relative_update_endpoint Property	Retrieves or sets the update endpoint. Will be combined with server Uri.
	IScriptCloudConfiguration.server Uri Property	Retrieves or sets the server Uri for Web based RDF backend.
	IScriptCloudConfiguration.sparql_endpoint Property	Retrieves the data endpoint.
	IScriptCloudConfiguration.update_endpoint Property	Retrieves the update endpoint. Will be combined with server Uri.

	<u>IScriptCloudConfiguration.update_execution_timeout Property</u>	Retrieves or sets the update execution timeout.
--	--	---

Methods

Name	Description
<u>IScriptCloudConfiguration.reset Method</u>	Resets the current configuration

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCloudConfiguration.IScriptCloudConfiguration Properties

The [IScriptCloudConfiguration](#) type exposes the following members.

Properties

Name	Description
 data_endpoint	Retrieves the data endpoint.
 dataset	Retrieves or sets the dataset name.
 http_backend_type	Retrieves or sets the triple storage http backend type.
 max_upload_triple_count_per_request	Retrieves or sets the maximum upload triple count per request.
 query_endpoint	Retrieves the query endpoint. Will be combined with server Uri.
 relative_data_endpoint	Retrieves or sets the data endpoint.
 relative_query_endpoint	Retrieves or sets the query endpoint. Will be combined with server UUriRL.
 relative_sparql_endpoint	Retrieves or sets the data endpoint.
 relative_update_endpoint	Retrieves or sets the update endpoint. Will be combined with server Uri.
 server_Uri	Retrieves or sets the server Uri for Web based RDF backend.
 sparql_endpoint	Retrieves the data endpoint.
 update_endpoint	Retrieves the update endpoint. Will be combined with server Uri.
 update_execution_timeout	Retrieves or sets the update execution timeout.

IScriptCloudConfiguration.relative_data_endpoint Property

Retrieves or sets the data endpoint.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string relative_data_endpoint { get; set; }
```

Property Value

Type: [String](#)

The data endpoint.

See Also

[IScriptCloudConfiguration Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCloudConfiguration.relative_query_endpoint Property

Retrieves or sets the query endpoint. Will be combined with server UUriRL.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string relative_query_endpoint { get; set; }
```

Property Value

Type: [String](#)

The query endpoint. Will be combined with server Uri.

See Also

[IScriptCloudConfiguration Interface](#)

IScriptCloudConfiguration.relative_sparql_endpoint Property

Retrieves or sets the data endpoint.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string relative_sparql_endpoint { get; set; }
```

Property Value

Type: [String](#)

The data endpoint.

See Also

[IScriptCloudConfiguration Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCloudConfiguration.relative_update_endpoint Property

Retrieves or sets the update endpoint. Will be combined with server Uri.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string relative_update_endpoint { get; set; }
```

Property Value

Type: [String](#)

The update endpoint. Will be combined with server Uri.

See Also

[IScriptCloudConfiguration Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCloudConfiguration.server_Uri Property

Retrieves or sets the server Uri for Web based RDF backend.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string server_Uri { get; set; }
```

Property Value

Type: [String](#)

The server Uri for Web based RDF backend.

See Also

IScriptCloudConnector Interface

Scripting API for cloud connector.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptCloudConnector
```

The **IScriptCloudConnector** type exposes the following members.

Properties

	Name	Description
	IScriptCloudConnector.configuration Property	Retrieves the code analysis cloud configuration.

Methods

	Name	Description
	IScriptCloudConnector.upload_to_triple_storage Method	Uploads the analysis results to a triple storage.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCodeAnalysis Interface

Interface that describes the script engine of code analysis

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptCodeAnalysis
```

The **IScriptCodeAnalysis** type exposes the following members.

Properties

	Name	Description
	IScriptCodeAnalysis.cloud_connector Property	Retrieves the cloud connector.
	IScriptCodeAnalysis.configuration Property	Retrieves the code analysis configuration.
	IScriptCodeAnalysis.conventions Property	Retrieves the conventions scripting API.
	IScriptCodeAnalysis.metrics Property	Retrieves the metrics scripting API.
	IScriptCodeAnalysis.portal Property	Retrieves the Machine Advisor Code Analysis portal API.
	IScriptCodeAnalysis.query_repository Property	Retrieves the query repository scripting API.

Methods

	Name	Description
= 	IScriptCodeAnalysis.clear Method	Clears all the Dependency Models (Analysis Controller and Query Engines).
= 	IScriptCodeAnalysis.perform_full_analysis Method	Perform full code analysis.
= 	IScriptCodeAnalysis.store_dependency_model Method	Stores the dependency model to file.
= 	IScriptCodeAnalysis.store_ttl Method	Stores analysis results as ttl file.

IScriptCodeAnalysis.store_dependency_model Method

Stores the dependency model to file.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void store_dependency_model (
    string filename
)
```

Parameters

filename

Type: [System.String](#)

The filename.

See Also

[*IScriptCodeAnalysis Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptCodeAnalysis.store_ttl Method

Stores analysis results as ttl file.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void store_ttl(  
    string filename  
)
```

Parameters

filename

Type: [System.String](#)

The filename.

```

Property Value

Type: [String](#)

The city.

See Also

[*IScriptCompany Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptCompany.id Property

Retrieves the identifier.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
Guid id { get; }
```

Property Value

Type: [Guid](#)

The identifier.

See Also

[*I*ScriptCompany Interface](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptCompany.name Property

Retrieves the name.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string name { get; }
```

Property Value

Type: [String](#)

The name.

See Also

[*IScriptCompany Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptCompany.street Property

Retrieves the street.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string street { get; }
```

Property Value

Type: [String](#)

The street.

See Also

IScriptConfiguration Interface

Scripting API to configure the code analysis query engine and code analyser.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptConfiguration
```

The **IScriptConfiguration** type exposes the following members.

Properties

Name	Description
 IScriptConfiguration.consider_check_functions Property	Retrieves or sets a value indicating whether to consider check functions.
 IScriptConfiguration.consider_devices Property	Retrieves or sets a value indicating whether to consider devices.
 IScriptConfiguration.consider_implicit_methods Property	Retrieves or sets a value indicating whether to consider implicit methods.
 IScriptConfiguration.consider_library_analysis_in_deep Property	Retrieves or sets a value indicating

		whether to consider library analysis in depth.
	<u>IScriptConfiguration.consider_property_accessor_functions Property</u>	Retrieves or sets a value indicating whether to consider property accessor functions.
	<u>IScriptConfiguration.data_endpoint Property</u>	Retrieves the data endpoint.
	<u>IScriptConfiguration.dataset Property</u>	Retrieves or sets the dataset name.
	<u>IScriptConfiguration.graph_name Property</u>	Sets the graph name.
	<u>IScriptConfiguration.max_upload_triple_count_per_request Property</u>	Retrieves or sets the maximum upload triple count per request.
	<u>IScriptConfiguration.query_endpoint Property</u>	Retrieves the query endpoint. Will be combined with server Uri.
	<u>IScriptConfiguration.query_execution_timeout Property</u>	Retrieves or sets the query execution timeout.
	<u>IScriptConfiguration.relative_data_endpoint Property</u>	Retrieves or sets the data endpoint.

	<u>IScriptConfiguration.relative_query_endpoint Property</u>	Retrieves or sets the query endpoint. Will be combined with server Uri.
	<u>IScriptConfiguration.relative_sparql_endpoint Property</u>	Retrieves or sets the data endpoint.
	<u>IScriptConfiguration.relative_update_endpoint Property</u>	Retrieves or sets the update endpoint. Will be combined with server Uri.
	<u>IScriptConfiguration.server_Uri Property</u>	Retrieves or sets the server Uri for Web based RDF backend.
	<u>IScriptConfiguration.sparql_endpoint Property</u>	Retrieves the data endpoint.
	<u>IScriptConfiguration.threshold_for_out_proc_backend_usage Property</u>	Retrieves or sets the threshold for out process backend usage.
	<u>IScriptConfiguration.triple_storage_backend_type Property</u>	Retrieves or sets the triple storage backend type.
	<u>IScriptConfiguration.update_endpoint Property</u>	Retrieves the update endpoint. Will be combined with server Uri.
	<u>IScriptConfiguration.update_execution_timeout Property</u>	Retrieves or sets the update

		execution timeout.
--	--	--------------------

Methods

Name	Description
 IScriptConfiguration.reset Method	Resets the current configuration

See Also

IScriptConfiguration.IScriptConfiguration Properties

The [IScriptConfiguration](#) type exposes the following members.

Properties

Name	Description
 consider_check_functions	Retrieves or sets a value indicating whether to consider check functions.
 consider_devices	Retrieves or sets a value indicating whether to consider devices.
 consider_implicit_methods	Retrieves or sets a value indicating whether to consider implicit methods.
 consider_library_analysis_in_deep	Retrieves or sets a value indicating whether to consider library analysis in depth.
 consider_property_accessor_functions	Retrieves or sets a value indicating whether to consider property accessor functions.
 data_endpoint	Retrieves the data endpoint.
 dataset	Retrieves or sets the dataset name.
 graph_name	Sets the graph name.
 max_upload_triple_count_per_request	Retrieves or sets the maximum upload triple count per request.
 query_endpoint	Retrieves the query endpoint. Will be combined with server Uri.
 query_execution_timeout	Retrieves or sets the query execution timeout.
 relative_data_endpoint	Retrieves or sets the data endpoint.

	<u>relative_query_endpoint</u>	Retrieves or sets the query endpoint. Will be combined with server UUriRL.
	<u>relative_sparql_endpoint</u>	Retrieves or sets the data endpoint.
	<u>relative_update_endpoint</u>	Retrieves or sets the update endpoint. Will be combined with server Uri.
	<u>server Uri</u>	Retrieves or sets the server Uri for Web based RDF backend.
	<u>sparql_endpoint</u>	Retrieves the data endpoint.
	<u>threshold_for_out_proc_backend_usage</u>	Retrieves or sets the threshold for out proc backend usage.
	<u>triple_storage_backend_type</u>	Retrieves or sets the triple storage backend type.
	<u>update_endpoint</u>	Retrieves the update endpoint. Will be combined with server Uri.
	<u>update_execution_timeout</u>	Retrieves or sets the update execution timeout.

IScriptConfiguration.consider_check_functions Property

Retrieves or sets a value indicating whether to consider check functions.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool consider_check_functions { get; set; }
```

Property Value

Type: [Boolean](#)

`true` if to consider check functions; otherwise, `false`.

See Also

IScriptConfiguration.data_endpoint Property

Retrieves the data endpoint.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string data_endpoint { get; }
```

Property Value

Type: [String](#)

The data endpoint.

See Also

[*IScriptConfiguration Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptConfiguration.dataset Property

Retrieves or sets the dataset name.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string dataset { get; set; }
```

Property Value

Type: [String](#)

The dataset name.

See Also

[*IScriptConfiguration Interface*](#)

IScriptConfiguration.query_endpoint Property

Retrieves the query endpoint. Will be combined with server Uri.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string query_endpoint { get; }
```

Property Value

Type: [String](#)

The query endpoint. Will be combined with server Uri.

See Also

[*IScriptConfiguration Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptConfiguration.query_execution_timeout Property

Retrieves or sets the query execution timeout.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
long query_execution_timeout { get; set; }
```

Property Value

Type: [Int64](#)

The query execution timeout.

IScriptConfiguration.relative_data_endpoint Property

Retrieves or sets the data endpoint.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string relative_data_endpoint { get; set; }
```

Property Value

Type: [String](#)

The data endpoint.

See Also

[IScriptConfiguration Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptConfiguration.relative_query_endpoint Property

Retrieves or sets the query endpoint. Will be combined with server UUriRL.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string relative_query_endpoint { get; set; }
```

Property Value

Type: [String](#)

The query endpoint. Will be combined with server Uri.

See Also

[IScriptConfiguration Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptConfiguration.relative_sparql_endpoint Property

Retrieves or sets the data endpoint.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string relative_sparql_endpoint { get; set; }
```

Property Value

Type: [String](#)

The data endpoint.

See Also

[IScriptConfiguration Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptConfiguration.relative_update_endpoint Property

Retrieves or sets the update endpoint. Will be combined with server Uri.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string relative_update_endpoint { get; set; }
```

Property Value

Type: [String](#)

The update endpoint. Will be combined with server Uri.

See Also

[IScriptConfiguration Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptConfiguration.server_Uri Property

Retrieves or sets the server Uri for Web based RDF backend.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string server_Uri { get; set; }
```

Property Value

Type: [String](#)

The server Uri for Web based RDF backend.

See Also

[*IScriptConfiguration Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptConfiguration.sparql_endpoint Property

Retrieves the data endpoint.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```

IScriptConfiguration.triple_storage_backend_type Property

Retrieves or sets the triple storage backend type.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
TripleStorageBackendTypes triple_storage_backend_type { get;  
set; }
```

Property Value

Type: [TripleStorageBackendTypes](#)

The triple storage backend type.

See Also

[IScriptConfiguration Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptConfiguration.update_endpoint Property

Retrieves the update endpoint. Will be combined with server Uri.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string update_endpoint { get; }
```

Property Value

Type: [String](#)

The update endpoint. Will be combined with server Uri.

See Also

[*IScriptConfiguration Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptConfiguration.update_execution_timeout Property

Retrieves or sets the update execution timeout.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```

IScriptConventions Interface

Scripting API to build convention table results.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptConventions
```

The **IScriptConventions** type exposes the following members.

Methods

	Name	Description
=◆	IScriptConventions.conventions_table Method	Starts the full Code Analysis and returns the conventions table for requested query chains.
=◆	IScriptConventions.full_conventions_table Method	Starts the full Code Analysis and returns the full conventions table.
=◆	IScriptConventions.get_all_conventions Method	Returns all available and valid convention names.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptConventions.IScriptConventions Methods

The [IScriptConventions](#) type exposes the following members.

Methods

	Name	Description
	conventions_table	Starts the full Code Analysis and returns the conventions table for requested query chains.
	full_conventions_table	Starts the full Code Analysis and returns the full conventions table.
	get_all_conventions	Returns all available and valid convention names.

See Also

[IScriptConventions Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptConventions.conventions_table Method

Starts the full Code Analysis and returns the conventions table for requested query chains.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IConventionsTableResults conventions_table(
    string[] query_chain_names
)
```

Parameters

query_chain_names

Type: [System.String\[\]](#)

query chains to execute

Return Value

Type: [IConventionsTableResults](#)

Conventions table result

See Also

[IScriptConventions Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

[IScriptConventions.full_conventions_table Method](#)

Starts the full Code Analysis and returns the full conventions table.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IConventionsTableResults full_conventions_table()
```

Return Value

Type: [IConventionsTableResults](#)

Conventions table result

See Also

[IScriptConventions Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptConventions.get_all_conventions Method

Returns all available and valid convention names.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string[] get_all_conventions()
```

Return Value

Type: [String\[\]](#)

All conventions

See Also

[*IScriptConventions Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptConventionsObject Interface

Scripting API attached to conventions table objects.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptConventionsObject
```

The **IScriptConventionsObject** type exposes the following members.

Methods

	Name	Description
	IScriptConventionsObject.conventions_table Method	Starts the full Code Analysis and returns the conventions table for requested query chains.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptConventionsObject.IScriptConventionsObject Methods

The [IScriptConventionsObject](#) type exposes the following members.

Methods

	Name	Description
=	conventions_table	Starts the full Code Analysis and returns the conventions table for requested query chains.

See Also

[*IScriptConventionsObject Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptConventionsObject.conventions_table Method

Starts the full Code Analysis and returns the conventions table for requested query chains.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IConventionsTableResults conventions_table()
```

Return Value

Type: [IConventionsTableResults](#)

Conventions table result.

See Also

[*IScriptConventionsObject Interface*](#)

IScriptCreateBlockListExtension Interface

Scripting API to extend an object for code analysis block list creation.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptCreateBlockListExtension
```

The **IScriptCreateBlockListExtension** type exposes the following members.

Methods

	Name	Description
	IScriptCreateBlockListExtension.create_code_analysis_block_list Method	Creates a code analysis block list with the specified name.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCreateBlockListExtension.IScriptCreateBlockListExtension Methods

The [IScriptCreateBlockListExtension](#) type exposes the following members.

Methods

Name	Description
 create_code_analysis_block_list	Creates a code analysis block list with the specified name.

See Also

[IScriptCreateBlockListExtension Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCreateBlockListExtension.create_code_analysis_block_list Method

Creates a code analysis block list with the specified name.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject>
create_code_analysis_block_list()
```

Return Value

Type: **IExtendedObject(IScriptObject)**

The **IScriptObject** of the newly created code analysis block list.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

IScriptCreateConventionsTableExtension.create_code_analysis_conventions_table Method

Creates a code analysis conventions table with the specified name.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject>
create_code_analysis_conventions_table(
    string name
)
```

Parameters

name

Type: [System.String](#)

The name.

Return Value

Type: **IExtendedObject(IScriptObject)**

The **IScriptObject** of the newly created code analysis conventions table.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

IScriptCreateDependencyViewExtension Interface

Scripting API to extend an object for code analysis dependency view creation.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptCreateDependencyViewExtension
```

The **IScriptCreateDependencyViewExtension** type exposes the following members.

Methods

	Name	Description
	IScriptCreateDependencyViewExtension.create_code_analysis_dependency_view Method	Creates a code analysis dependency view with the specified name.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCreateDependencyViewExtension Methods

The [IScriptCreateDependencyViewExtension](#) type exposes the following members.

Methods

	Name	Description
	create_code_analysis_dependency_view	Creates a code analysis dependency view with the specified name.

See Also

[IScriptCreateDependencyViewExtension Interface](#)
[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCreateDependencyViewExtension.create_code_analysis_dependency_view Method

Creates a code analysis dependency view with the specified name.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_code_analysis_dependency_view(
    string name
)
```

Parameters

name

Type: [System.String](#)

The name.

Return Value

Type: **IExtendedObject(IScriptObject)**

The **IScriptObject** of the newly created code analysis dependency view.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

See Also

Scripting API to extend an object for code analysis manager object creation.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptCreateManagerObjectExtension
```

The **IScriptCreateManagerObjectExtension** type exposes the following members.

Methods

	Name	Description
	IScriptCreateManagerObjectExtension.create_code_analysis_manager_object Method	Creates a code analysis manager object.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCreateManagerObjectExtension.IScriptCreateManagerObjectExtension Methods

The [IScriptCreateManagerObjectExtension](#) type exposes the following members.

Methods

	Name	Description
	create_code_analysis_manager_object	Creates a code analysis manager object.

See Also

[IScriptCreateManagerObjectExtension Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCreateManagerObjectExtension.create_code_analysis_manager_object Method

Creates a code analysis manager object.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_code_analysis_manager_object()
```

Return Value

Type: **IExtendedObject(IScriptObject)**

The **IScriptObject** of the newly created code analysis manager object.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

See Also

[IScriptCreateManagerObjectExtension Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCreateMetricsTableExtension Interface

Scripting API to extend an object for code analysis metrics table creation.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptCreateMetricsTableExtension
```

The **IScriptCreateMetricsTableExtension** type exposes the following members.

Methods

	Name	Description
	IScriptCreateMetricsTableExtension.create_code_analysis_metrics_table Method	Creates a code analysis metrics table with the specified name.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCreateMetricsTableExtension.IScriptCreateMetricsTableExtension Methods

The [IScriptCreateMetricsTableExtension](#) type exposes the following members.

Methods

	Name	Description
	create_code_analysis_metrics_table	Creates a code analysis metrics table with the specified name.

See Also

[IScriptCreateMetricsTableExtension Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptCreateMetricsTableExtension.create_code_analysis_metrics_table Method

Creates a code analysis metrics table with the specified name.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin
(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_code_analysis_metrics_table(
    string name
)
```

Parameters

name

Type: [System.String](#)

The name.

Return Value

Type: **IExtendedObject(IScriptObject)**

The **IScriptObject** of the newly created code analysis metrics table.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptMetrics Interface

Scripting API to build metrics table results.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptMetrics
```

The **IScriptMetrics** type exposes the following members.

Methods

Name	Description
 IScriptMetrics.full_metrics_table Method	Starts the full Code Analysis and returns the full metrics table.
 get_all_metrics	Returns all available and valid metrics names.
 metrics_table	Starts the full Code Analysis and returns the metrics table for requested query chains.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptMetrics.IScriptMetrics Methods

The [IScriptMetrics](#) type exposes the following members.

Methods

Name	Description
 full_metrics_table	Starts the full Code Analysis and returns the full metrics table.
 IScriptMetrics.get_all_metrics_Method	Returns all available and valid metrics names.
 IScriptMetrics.metrics_table_Method	Starts the full Code Analysis and returns the metrics table for requested query chains.

See Also

[IScriptMetrics Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptMetrics.full_metrics_table Method

Starts the full Code Analysis and returns the full metrics table.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IMetricsTableResults full_metrics_table()
```

Return Value

Type: [IMetricsTableResults](#)

The metrics result table.

See Also

[*IScriptMetrics Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptMetrics.get_all_metrics Method

Returns all available and valid metrics names.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string[] get_all_metrics()
```

Return Value

Type: [String\[\]](#)

All available metric queries

See Also

[*IScriptMetrics Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptMetrics.metrics_table Method

Starts the full Code Analysis and returns the metrics table for requested query chains.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin
(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IMetricsTableResults metrics_table(
    string[] query_chain_names
)
```

Parameters

query_chain_names

Type: [System.String\[\]](#)

query chains to execute

Return Value

Type: [IMetricsTableResults](#)

The metrics result table

See Also

[*IScriptMetrics Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptMetricsObject Interface

Scripting API attached to metrics table objects.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptMetricsObject
```

The **IScriptMetricsObject** type exposes the following members.

Methods

	Name	Description
	IScriptMetricsObject.metrics_table Method	Starts the full Code Analysis and returns the metrics table for requested query chains.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptMetricsObject.IScriptMetricsObject Methods

The [IScriptMetricsObject](#) type exposes the following members.

Methods

	Name	Description
	metrics_table	Starts the full Code Analysis and returns the metrics table for requested query chains.

See Also

[IScriptMetricsObject Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptMetricsObject.metrics_table Method

Starts the full Code Analysis and returns the metrics table for requested query chains.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin
(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IMetricsTableResults metrics_table()
```

Return Value

Type: [IMetricsTableResults](#)

The metrics result table.

See Also

[*IScriptMetricsObject Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptPortal Interface

Scripting API for Machine Advisor Code Analysis cloud portal.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptPortal
```

The **IScriptPortal** type exposes the following members.

Properties

Name	Description
 IScriptPortal.analysis_project Property	Retrieves or sets the current analysis project.
 IScriptPortal.analysis_projects Property	Retrieves the available analysis_projects
 IScriptPortal.companies Property	Retrieves the available companies
 IScriptPortal.company Property	Retrieves or sets the current company.
 IScriptPortal.queries Property	Retrieves the Machine Advisor Code Analysis queries API.
 IScriptPortal.snapshots Property	Retrieves the Machine Advisor Code Analysis snapshots API.
 IScriptPortal.URL Property	Configures the URL for Machine Advisor Code Analysis cloud portal.

Methods

	Name	Description
	IScriptPortal.login Method	Performs the login with the specified access token.
	IScriptPortal.logout Method	Performs logout.

See Also

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptPortal.IScriptPortal Properties

The [IScriptPortal](#) type exposes the following members.

Properties

Name	Description
 analysis_project	Retrieves or sets the current analysis project.
 analysis_projects	Retrieves the available analysis_projects.
 companies	Retrieves the available companies.
 company	Retrieves or sets the current company.
 queries	Retrieves the Machine Advisor Code Analysis queries API.
 snapshots	Retrieves the Machine Advisor Code Analysis snapshots API.
 URL	Configures the URL for Machine Advisor Code Analysis cloud portal.

See Also

[IScriptPortal Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

[IScriptPortal.analysis_project Property](#)

Retrieves or sets the current analysis project.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptAnalysisProject analysis_project { get; set; }
```

Property Value

Type: [IScriptAnalysisProject](#)

The current analysis project.

See Also

[IScriptPortal Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptPortal.analysis_projects Property

Retrieves the available analysis_projects

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptAnalysisProject[] analysis_projects { get; }
```

Property Value

Type: [IScriptAnalysisProject\[\]](#)

See Also

[IScriptPortal Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptPortal.companies Property

Retrieves the available companies

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptCompany[] companies { get; }
```

Property Value

Type: [IScriptCompany\[\]](#)

See Also

[IScriptPortal Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptPortal.company Property

Retrieves or sets the current company.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptCompany company { get; set; }
```

Property Value

Type: [IScriptCompany](#)

The current company.

See Also

[*IScriptPortal Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptPortal.queries Property

Retrieves the Machine Advisor Code Analysis queries API.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptQueries queries { get; }
```

Property Value

Type: [IScriptQueries](#)

The Machine Advisor Code Analysis queries API.

See Also

[*IScriptPortal Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptPortal.snapshots Property

Retrieves the Machine Advisor Code Analysis snapshots API.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptSolutions snapshots { get; }
```

Property Value

Type: [IScriptSolutions](#)

The Machine Advisor Code Analysis snapshots API.

See Also

[*IScriptPortal Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptPortal.URL Property

Configures the URL for Machine Advisor Code Analysis cloud portal.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string URL { get; set; }
```

Property Value

Type: [String](#)

See Also

[IScriptPortal Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptPortal.IScriptPortal Methods

The [IScriptPortal](#) type exposes the following members.

Methods

	Name	Description
 	login	Performs the login with the specified access token.
 	logout	Performs logout.

See Also

[IScriptPortal Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptPortal.login Method

Performs the login with the specified access token.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void login(  
    string access_token = null  
)
```

Parameters

access_token (Optional)

Type: [System.String](#)

The access token.

See Also

[IScriptPortal Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptPortal.logout Method

Performs logout.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void logout()
```

See Also

[*IScriptPortal Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptProjectExtension Interface

Scripting API to extend the project script object for Code Analysis operation access (for POU space).

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptProjectExtension
```

The **IScriptProjectExtension** type exposes the following members.

Properties

	Name	Description
	IScriptProjectExtension.code_analysis Property	Access to code_analysis scripting API.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptProjectExtension.IScriptProjectExtension Properties

The [IScriptProjectExtension](#) type exposes the following members.

Properties

	Name	Description
	code_analysis	Access to code_analysis scripting API.

See Also

[IScriptProjectExtension Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

[IScriptProjectExtension.code_analysis Property](#)

Access to code_analysis scripting API.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptCodeAnalysis code_analysis { get; }
```

Property Value

Type: [IScriptCodeAnalysis](#)

The code_analysis scripting API.

See Also

[IScriptProjectExtension Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptQueries Interface

Scripting API for Machine Advisor Code Analysis queries.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptQueries
```

The **IScriptQueries** type exposes the following members.

Methods

Name	Description
 IScriptQueries.upload Method	Upload specified query chain (and its queries) to Machine Advisor Code Analysis cloud.
 upload(IEnumerable(IScriptQueryChain))	Upload specified query chains (and its queries) to Machine Advisor Code Analysis cloud.
 upload_all	Upload all query chains (and its queries) to Machine Advisor Code Analysis cloud.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptQueries.IScriptQueries Methods

The IScriptQueries type exposes the following members.

Methods

	Name	Description
	upload(IQueryChain)	Upload specified query chain (and its queries) to Machine Advisor Code Analysis cloud.
	IScriptQueries.upload Method (IQueryChain)	Upload specified query chains (and its queries) to Machine Advisor Code Analysis cloud.
	IScriptQueries.upload_all Method	Upload all query chains (and its queries) to Machine Advisor Code Analysis cloud.

See Also

[*IScriptQueries Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptQueries.upload Method

Overload List

	Name	Description
	upload(IQueryChain)	Upload specified query chain (and its queries) to Machine Advisor Code Analysis cloud.
	upload(IEnumerable(IQueryChain))	Upload specified query chains (and its queries) to Machine Advisor Code Analysis cloud.

See Also

[*IScriptQueries Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptQueries.upload Method (IScriptQueryChain)

Upload specified query chain (and its queries) to Machine Advisor Code Analysis cloud.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin
(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool upload(  
    IScriptQueryChain query_chain  
)
```

Parameters

query_chain

Type: [SchneiderElectric.Scripting.CodeAnalysis.IScriptQueryChain](#)

The query to upload.

Return Value

Type: [Boolean](#)

Indicates if upload succeeded

See Also

[IScriptQueries Interface](#)

[upload Overload](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptQueries.upload Method (IEnumerable(IQueryChain))

Upload specified query chains (and its queries) to Machine Advisor Code Analysis cloud.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin
(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool upload(  
    IEnumerable<IQueryChain> query_chains  
)
```

Parameters

query_chains

Type: [System.Collections.Generic.IEnumerable\(IQueryChain\)](#)

The queries to upload.

Return Value

Type: [Boolean](#)

Indicates if upload succeeded

See Also

[IQueryChain Interface](#)

[upload Overload](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptQueries.upload_all Method

Upload all query chains (and its queries) to Machine Advisor Code Analysis cloud.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin
(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool upload_all()
```

Return Value

Type: [Boolean](#)

Indicates if upload succeeded

See Also

[*IScriptQueries Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptQuery Interface

Scripting API of a query object.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptQuery
```

The **IScriptQuery** type exposes the following members.

Properties

Name	Description
 IScriptQuery.category Property	Retrieves the category.
 IScriptQuery.editable Property	Retrieves a value indicating whether this IScriptQuery is editable.
 IScriptQuery.name Property	Retrieves the name.
 IScriptQuery.parameters Property	Retrieves the parameters.
 IScriptQuery.text Property	Retrieves the text.
 IScriptQuery.unique_id Property	Retrieves the unique identifier.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptQuery.IScriptQuery Properties

The [IScriptQuery](#) type exposes the following members.

Properties

	Name	Description
	category	Retrieves the category.
	editable	Retrieves a value indicating whether this IScriptQuery is editable.
	name	Retrieves the name.
	parameters	Retrieves the parameters.
	text	Retrieves the text.
	unique_id	Retrieves the unique identifier.

See Also

[IScriptQuery Interface](#)

IScriptQuery.category Property

Retrieves the category.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string category { get; }
```

Property Value

Type: [String](#)

The category.

See Also

[*IScriptQuery Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptQuery.editable Property

Retrieves a value indicating whether this [IScriptQuery](#) is editable.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool editable { get; }
```

Property Value

Type: [Boolean](#)

`true` if editable; otherwise, `false`.

See Also

Scripting API of a query chain object.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptQueryChain
```

The **IScriptQueryChain** type exposes the following members.

Properties

Name	Description
 IScriptQueryChain.category Property	Retrieves the category.
 IScriptQueryChain.description Property	Retrieves the description.
 IScriptQueryChain.editable Property	Retrieves a value indicating whether this IScriptQueryChain is editable.
 IScriptQueryChain.group Property	Retrieves the group.
 IScriptQueryChain.name Property	Retrieves the name.
 IScriptQuery.parameters Property	Retrieves the parameters.
 IScriptQueryChain.queries Property	Retrieves the assigned queries.
 IScriptQueryChain.unique_id Property	Retrieves the unique identifier.

See Also

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptQueryChain.IScriptQueryChain Properties

The [IScriptQueryChain](#) type exposes the following members.

Properties

Name	Description
 category	Retrieves the category.
 description	Retrieves the description.
 editable	Retrieves a value indicating whether this IScriptQueryChain is editable.
 group	Retrieves the group.
 name	Retrieves the name.
 parameters	Retrieves the parameters.
 queries	Retrieves the assigned queries.
 unique_id	Retrieves the unique identifier.

Retrieves the unique identifier.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
Guid unique_id { get; }
```

Property Value

Type: [Guid](#)

The unique identifier.

See Also

[*IQueryChain Interface*](#)

IScriptQueryParameter Interface

Scripting API of a query parameter object

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptQueryParameter
```

The **IScriptQueryParameter** type exposes the following members.

Properties

	Name	Description
	IScriptQueryParameter.category Property	Retrieves the category.
	IScriptQueryParameter.name Property	Retrieves the parameter name.
	IScriptQueryParameter.value Property	Retrieves the parameter value.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptQueryParameter.IScriptQueryParameter Properties

The [IScriptQueryParameter](#) type exposes the following members.

Properties

	Name	Description
	category	Retrieves the category.
	name	Retrieves the parameter name.
	value	Retrieves the parameter value.

See Also

[IScriptQueryParameter Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptQueryParameter.category Property

Retrieves the category.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string category { get; }
```

Property Value

Type: [String](#)

The category.

See Also

[*IScriptQueryParameter Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptQueryParameter.name Property

Retrieves the parameter name.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string name { get; }
```

Property Value

Type: [String](#)

The parameter name.

See Also

[*IScriptQueryParameter Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptQueryParameter.value Property

Retrieves the parameter value.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string value { get; }
```

Property Value

Type: [String](#)

The parameter value.

See Also

[*IScriptQueryParameter Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptQueryRepository Interface

Scripting API to access all query chains.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptQueryRepository
```

The **IScriptQueryRepository** type exposes the following members.

Methods

Name	Description
 IScriptQueryRepository.get_all_query_chains Method	Retrieves all query chains.
 IScriptQueryRepository.get_query_chain_by_name Method	Retrieves the query chains by name.
 IScriptQueryRepository.get_query_chain_by_unique_id Method	Retrieves the query chains by unique identifier.
 IScriptQueryRepository.get_query_chains_by_name Method	Retrieves queries that contain the given string as part of the name.

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

IScriptQueryRepository.IScriptQueryRepository Methods

The [IScriptQueryRepository](#) type exposes the following members.

Methods

Name	Description
 get_all_query_chains	Retrieves all query chains.
 get_query_chain_by_name	Retrieves the query chains by name.
 get_query_chain_by_unique_id	Retrieves the query chains by unique identifier.
 get_query_chains_by_name	Retrieves queries that contain the given string as part of the name.

Retrieves the query chains by name.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptQueryChain get_query_chain_by_name (
    string name
)
```

Parameters

name

Type: [System.String](#)

The name.

Return Value

Type: [IScriptQueryChain](#)

The requested query chains

See Also

[IScriptQueryRepository Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

[IScriptQueryRepository.get_query_chain_by_unique_id Method](#)

Retrieves the query chains by unique identifier.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptQueryChain get_query_chain_by_unique_id(  
    Guid unique_id  
)
```

Parameters

unique_id

Type: [System.Guid](#)

The unique identifier.

Return Value

Type: [IScriptQueryChain](#)

The requested query chain.

See Also

[IScriptQueryRepository Interface](#)

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

[IScriptQueryRepository.get_query_chains_by_name Method](#)

Retrieves queries that contain the given string as part of the name.

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptQueryChain[] get_query_chains_by_name (
    string name_search_text
)
```

Parameters

name_search_text

Type: [System.String](#)

The name search text.

Return Value

Type: [IScriptQueryChain\[\]](#)

The requested query chains.

See Also

IScriptSnapshotOptions Interface

Scripting API for Machine Advisor Code Analysis snapshot options.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptSnapshotOptions
```

The **IScriptSnapshotOptions** type exposes the following members.

Properties

Name	Description
 IScriptSnapshotOptions.changelog Property	Retrieves or sets the snapshot changelog.
 IScriptSnapshotOptions.creation_date Property	Retrieves or sets the creation date.
 IScriptSnapshotOptions.name Property	Retrieves or sets the name.
 IScriptSnapshotOptions.notes Property	Retrieves or sets the snapshot notes.
 IScriptSnapshotOptions.released Property	Retrieves or sets a value indicating whether this snapshot was released.
 IScriptSnapshotOptions.version Property	Retrieves or sets the version.

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool released { get; set; }
```

Property Value

Type: [Boolean](#)

`true` if released; otherwise, `false`.

See Also

[*IScriptSnapshotOptions Interface*](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptSnapshotOptions.version Property

Retrieves or sets the version.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
string version { get; set; }
```

Property Value

Type: [String](#)

The version.

See Also

[*I*ScriptSnapshotOptions Interface](#)

[*SchneiderElectric.Scripting.CodeAnalysis Namespace*](#)

IScriptSnapshots Interface

Scripting API for Machine Advisor Code Analysis snapshots.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.Programming.CodeAnalysisIntegration.plugin

(in SchneiderElectric.Programming.CodeAnalysisIntegration.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptSnapshots
```

The **IScriptSnapshots** type exposes the following members.

Methods

Name	Description
 IScriptSnapshots.create_snapshot_options Method	Creates the snapshot options.
 IScriptSnapshots.store Method (String, String)	Stores the Code Analysis snapshot to disk.
 IScriptSnapshots.store Method (IScriptSnapshotOptions, String)	Stores the Code Analysis snapshot to disk.
 upload(String)	Uploads the snapshot to Code Analysis cloud.
 upload(IScriptSnapshotOptions)	Uploads the snapshot to Code Analysis cloud.

HttpBackendTypes Enumeration

The available and supported Http Backend types

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.CodeAnalysis.QueryEngine (in SchneiderElectric.CodeAnalysis.QueryEngine.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public enum HttpBackendTypes
```

Members

Member name	Value	Description
Generic	0	The generic Http connector for Endpoints fulfilling the SPARQL Protocol Specification
Fuseki	1	The fuseki http connector
Stardog	2	The stardog http connector

See Also

[SchneiderElectric.Scripting.CodeAnalysis Namespace](#)

TripleStorageBackendTypes Enumeration

Definition of used strategy for backend type selection.

Namespace: [SchneiderElectric.Scripting.CodeAnalysis](#)

Assembly: SchneiderElectric.CodeAnalysis.QueryEngine (in SchneiderElectric.CodeAnalysis.QueryEngine.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public enum TripleStorageBackendTypes
```

Members

Member name	Value	Description
OutProc	0	Force Out-Process (use own TripleStorage exe, e.g., with In-Memory as backend + CodeAnalysis WCF based protocol as communication)
DebugOutProc	1	Force debug Out-Process (like ForceOutProc but with debug configuration for TripleStorage)
Automatic	2	Automatic selection
InMemory	3	Force In-Memory RDF backend -- see dotNetRDF
Http	4	Force http based RDF backend -- see dotNetRDF

Chapter 2

SchneiderElectric.Scripting.Collections Namespace

This namespace contains scripting list collections.

Interfaces

	Interface	Description
↳	IScriptCollection(T)	Defines methods to manipulate generic collections.
↳	IScriptList(T)	Represents a collection of objects that can be individually accessed by index.
↳	IScriptList2(T)	Extension interface for IScriptList(T)

IScriptCollection(*T*) Interface

Defines methods to manipulate generic collections.

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptCollection<T> : IEnumerable<T>,
    IEnumerable
```

Type Parameters

T

The type of the elements in the collection.

The IScriptCollection(*T*) type exposes the following members.

Properties

	Name	Description
	IScriptCollection(<i>T</i>).count Property	Retrieves the number of elements contained in the IScriptCollection(<i>T</i>).
	IScriptCollection(<i>T</i>).is_READONLY Property	Retrieves a value indicating whether the IScriptCollection(<i>T</i>) is read-only.

Methods

	Name	Description
	IScriptCollection(<i>T</i>).add Method	Adds an item to the IScriptCollection(<i>T</i>).

 IScriptCollection(T).clear Method	Removes all items from the IScriptCollection(T).
 IScriptCollection(T).contains Method	Determines whether the IScriptCollection(T) contains a specific value.
 IScriptCollection(T).copy_to Method	Copies the elements of the IScriptCollection(T) to an Array , starting at a particular Array index.
 IScriptCollection(T).remove Method	Removes the first occurrence of a specific object from the IScriptCollection(T).

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Collections Namespace](#)

I`ScriptCollection`(*T*).I`ScriptCollection`(*T*) Properties

The [I`ScriptCollection`\(*T*\)](#) generic type exposes the following members.

Properties

	Name	Description
	count	Retrieves the number of elements contained in the I<code>ScriptCollection</code>(<i>T</i>) .
	is_READONLY	Retrieves a value indicating whether the I<code>ScriptCollection</code>(<i>T</i>) is read-only.

See Also

[I`ScriptCollection`\(*T*\) Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptCollection(*T*).count Property

Retrieves the number of elements contained in the [IScriptCollection\(*T*\)](#).

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
int count { get; }
```

Return Value

Type: [Int32](#)

The number of elements contained in the [IScriptCollection\(*T*\)](#).

See Also

[IScriptCollection\(*T*\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptCollection(T).is_READONLY Property

Retrieves a value indicating whether the [IScriptCollection\(T\)](#) is read-only.

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool is_READONLY { get; }
```

Return Value

Type: [Boolean](#)

true if the [IScriptCollection\(T\)](#) is read-only; otherwise, false.

See Also

[IScriptCollection\(T\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptCollection(*T*).IScriptCollection(*T*) Methods

The [IScriptCollection\(*T*\)](#) generic type exposes the following members.

Methods

Name	Description
 add	Adds an item to the IScriptCollection(<i>T</i>) .
 clear	Removes all items from the IScriptCollection(<i>T</i>) .
 contains	Determines whether the IScriptCollection(<i>T</i>) contains a specific value.
 copy_to	Copies the elements of the IScriptCollection(<i>T</i>) to an Array , starting at a particular Array index.
 remove	Removes the first occurrence of a specific object from the IScriptCollection(<i>T</i>) .

See Also

[IScriptCollection\(*T*\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptCollection(*T*).add Method

Adds an item to the [IScriptCollection\(*T*\)](#).

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void add(  
    T item  
)
```

Parameters

item

Type: *T*

The object to add to the [IScriptCollection\(*T*\)](#).

Exceptions

Exception	Condition
NotSupportedException	The IScriptCollection(<i>T</i>) is read-only.

See Also

[IScriptCollection\(*T*\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

[IScriptCollection\(T\).clear Method](#)

Removes all items from the [IScriptCollection\(T\)](#).

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void clear()
```

Exceptions

Exception	Condition
NotSupportedException	The IScriptCollection(T) is read-only.

See Also

[IScriptCollection\(T\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptCollection(*T*).contains Method

Determines whether the [IScriptCollection\(*T*\)](#) contains a specific value.

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool contains(  
    T item  
)
```

Parameters

item

Type: *T*

The object to locate in the [IScriptCollection\(*T*\)](#).

Return Value

Type: [Boolean](#)

true if *item* is found in the [IScriptCollection\(*T*\)](#); otherwise, false.

See Also

[IScriptCollection\(*T*\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

[IScriptCollection\(T\).copy_to Method](#)

Copies the elements of the [IScriptCollection\(T\)](#) to an [Array](#), starting at a particular [Array](#) index.

Namespace: SchneiderElectric.Scripting.Collections

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void copy_to(
    T[] array,
    int arrayIndex
)
```

Parameters

array

Type: *T[]*

The one-dimensional [Array](#) that is the destination of the elements copied from [IScriptCollection\(T\)](#). The [Array](#) must have zero-based indexing.

arrayIndex

Type: [System.Int32](#)

The zero-based index in *array* at which copying begins.

Exceptions

Exception	Condition
ArgumentNullException	<i>array</i> is null.
ArgumentOutOfRangeException	<i>arrayIndex</i> is less than 0.

[ArgumentException](#)

The number of elements in the source [IScriptCollection\(T\)](#) is greater than the available space from *arrayIndex* to the end of the destination *array*.

See Also

[IScriptCollection\(T\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptCollection(*T*).remove Method

Removes the first occurrence of a specific object from the [IScriptCollection\(*T*\)](#).

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool remove(  
    T item  
)
```

Parameters

item

Type: *T*

The object to remove from the [IScriptCollection\(*T*\)](#).

Return Value

Type: [Boolean](#)

true if *item* was successfully removed from the [IScriptCollection\(*T*\)](#); otherwise, false. This method also returns false if *item* is not found in the original [IScriptCollection\(*T*\)](#).

Exceptions

Exception	Condition
NotSupportedException	The IScriptCollection(<i>T</i>) is read-only.

See Also

[*IScriptCollection\(T\)Interface*](#)

[*SchneiderElectric.Scripting.Collections Namespace*](#)

IScriptList(*T*) Interface

Represents a collection of objects that can be individually accessed by index.

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptList<T> : IScriptCollection<T>,
    IEnumerable<T>, IEnumerable
```

Type Parameters

T

The type of elements in the list.

The IScriptList(*T*) type exposes the following members.

Properties

	Name	Description
	IScriptList(<i>T</i>).Item Property	Retrieves or sets the element at the specified index.

Methods

	Name	Description
	IScriptList(<i>T</i>).index_of Method	Determines the index of a specific item in the IScriptList(<i>T</i>).
	IScriptList(<i>T</i>).insert Method	Inserts an item to the IScriptList(<i>T</i>) at the specified index.

 IScriptList(T).remove_at Method	Removes the IScriptList(T) item at the specified index.
--	---

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[*SchneiderElectric.Scripting.Collections Namespace*](#)

IScriptList(*T*).IScriptList(*T*) Properties

The [IScriptList\(*T*\)](#) generic type exposes the following members.

Properties

	Name	Description
	Item	Retrieves or sets the element at the specified index.

See Also

[*IScriptList\(*T*\)Interface*](#)

[*SchneiderElectric.Scripting.Collections Namespace*](#)

IScriptList(*T*).Item Property

Retrieves or sets the element at the specified index.

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
T this[  
    int index  
] { get; set; }
```

Parameters

index

Type: [System.Int32](#)

The zero-based index of the element to get or set.

Property Value

Type: *T*

The element at the specified index.

See Also

[*IScriptList\(T\)Interface*](#)

[*SchneiderElectric.Scripting.Collections Namespace*](#)

IScriptList(*T*).IScriptList(*T*) Methods

The [IScriptList\(*T*\)](#) generic type exposes the following members.

Methods

	Name	Description
	index_of	Determines the index of a specific item in the IScriptList(<i>T</i>) .
	insert	Inserts an item to the IScriptList(<i>T</i>) at the specified index.
	remove_at	Removes the IScriptList(<i>T</i>) item at the specified index.

See Also

[IScriptList\(*T*\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptList(T).index_of Method

Determines the index of a specific item in the [IScriptList\(T\)](#).

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
int index_of(  
    T item  
)
```

Parameters

item

Type: *T*

The object to locate in the [IScriptList\(T\)](#).

Return Value

Type: [Int32](#)

The index of item if found in the list; otherwise, -1.

Remarks

If an object occurs multiple times in the list, the IndexOf method always returns the first instance found.

See Also

[IScriptList\(T\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptList(T).insert Method

Inserts an item to the [IScriptList\(T\)](#) at the specified index.

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void insert(  
    int index,  
    T item  
)
```

Parameters

index

Type: [System.Int32](#)

The zero-based index at which item should be inserted.

item

Type: *T*

The object to insert into the [IScriptList\(T\)](#).

See Also

[IScriptList\(T\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptList(*T*).remove_at Method

Removes the [IScriptList\(*T*\)](#) item at the specified index.

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void remove_at(
    int index
)
```

Parameters

index

Type: [System.Int32](#)

The zero-based index of the item to remove.

See Also

[IScriptList\(*T*\)Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptList2(T) Interface

Extension interface for [IScriptList\(T\)](#)

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptList2<T> : IScriptList<T>,
    IScriptCollection<T>, IEnumerable<T>, IEnumerable
```

Type Parameters

T

The IScriptList2(T) type exposes the following members.

Methods

Name	Description
 IScriptList2(T).add_range Method	Adds the elements of the specified collection to the end of the IScriptCollection(T) .
 IScriptList2(T).remove_range Method	Removes a range of elements from the IScriptCollection(T) .

See Also

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptList2(T).IScriptList2(T) Methods

The [IScriptList2\(T\)](#) generic type exposes the following members.

Methods

	Name	Description
	add_range	Adds the elements of the specified collection to the end of the IScriptCollection(T) .
	remove_range	Removes a range of elements from the IScriptCollection(T) .

See Also

[IScriptList2\(T\) Interface](#)

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptList2(T).add_range Method

Adds the elements of the specified collection to the end of the [IScriptCollection\(T\)](#).

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void add_range(  
    IEnumerable<T> collection  
)
```

Parameters

collection

Type: [System.Collections.Generic.IEnumerable\(T\)](#)

The collection whose elements should be added to the end of the [IScriptCollection\(T\)](#).

Exceptions

Exception	Condition
NotSupportedException	The IScriptCollection(T) is read-only.
ArgumentNullException	collection is <code>null</code> .

See Also

[SchneiderElectric.Scripting.Collections Namespace](#)

IScriptList2(*T*).remove_range Method

Removes a range of elements from the [IScriptCollection\(*T*\)](#).

Namespace: [SchneiderElectric.Scripting.Collections](#)

Assembly: SchneiderElectric.Platform.Scripting (in SchneiderElectric.Platform.Scripting.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void remove_range(
    IEnumerable<T> collection
)
```

Parameters

collection

Type: [System.Collections.Generic.IEnumerable\(*T*\)](#)

The collection whose elements should be removed from the [IScriptCollection\(*T*\)](#).

Exceptions

Exception	Condition
NotSupportedException	The IScriptCollection(<i>T</i>) is read-only.
ArgumentNullException	<i>collection</i> is <code>null</code> .

Chapter 3

SchneiderElectric.Scripting.Extensions.Application Namespace

This namespace contains extensions methods to the handle application objects.

Classes

	Class	Description
	ParameterListHandlingExtension	Extends a IScriptApplication with the ability to add new parameter list objects.

ParameterListHandlingExtension Class

Extends a **IScriptApplication** with the ability to add new parameter list objects.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Extensions.Application.ParameterListHandlingExtension

Namespace: [SchneiderElectric.Scripting.Extensions.Application](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public sealed class ParameterListHandlingExtension
```

The **ParameterListHandlingExtension** type exposes the following members.

Constructors

	Name	Description
	ParameterListHandlingExtension Constructor	Initializes a new instance of the ParameterListHandlingExtension class.

Methods

	Name	Description
	ParameterListHandlingExtension.add_parameter_list Method	Adds a new parameter list to the application.

See Also

[*SchneiderElectric.Scripting.Extensions.Application Namespace*](#)

ParameterListHandlingExtension Constructor

Initializes a new instance of the [ParameterListHandlingExtension](#) class.

Namespace: [SchneiderElectric.Scripting.Extensions.Application](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public ParameterListHandlingExtension(  
    IScriptObject scriptObject  
)
```

Parameters

scriptObject

Type: IScriptObject

The script object.

Exceptions

Exception	Condition
ArgumentNullException	scriptObject is null.

See Also

[SchneiderElectric.Scripting.Extensions.Application Namespace](#)

ParameterListHandlingExtension.ParameterListHandlingExtension Methods

The [ParameterListHandlingExtension](#) type exposes the following members.

Methods

	Name	Description
	add_parameter_list	Adds a new parameter list to the application.

See Also

[ParameterListHandlingExtension Class](#)

[SchneiderElectric.Scripting.Extensions.Application Namespace](#)

ParameterListHandlingExtension.add_parameter_list Method

Adds a new parameter list to the application.

Namespace: [SchneiderElectric.Scripting.Extensions.Application](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public IExtendedObject<IScriptObject> add_parameter_list(  
    string name  
)
```

Parameters

name

Type: [System.String](#)

The name of the new parameter list.

Return Value

Type: IExtendedObject(IScriptObject)

A script object

Exceptions

Exception	Condition
ArgumentException	Name is null or empty.

Examples

This example shows how to add a new parameter list to an existing application.

Python

```
p = projects.primary
app = p.active_application

# create a new parameter list with the name 'ParameterList'
app.add_parameter_list('ParameterList')
```

Chapter 4

SchneiderElectric.Scripting.Extensions.ApplicationLogger Namespace

This namespace contains extensions methods to the handle application logger objects.

Classes

	Class	Description
	ApplicationLoggerExtension	The application logger extension

Interfaces

	Interface	Description
	IScriptApplicationLoggerObjectMarker	Every IScriptObject instance will be extended with this method.

ApplicationLoggerExtension Class

The application logger extension

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Extensions.ApplicationLogger.ApplicationLogger Extension

Namespace: [SchneiderElectric.Scripting.Extensions.ApplicationLogger](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public sealed class ApplicationLoggerExtension
```

The **ApplicationLoggerExtension** type exposes the following members.

Constructors

	Name	Description
 ApplicationLoggerExtension Constructor		Creates an instance of ApplicationLoggerExtension

Methods

	Name	Description
 ApplicationLoggerExtension.add_application_logger Method		Adds a new application logger object to the application.

Creates an instance of [ApplicationLoggerExtension](#)

Namespace: [SchneiderElectric.Scripting.Extensions.ApplicationLogger](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public ApplicationLoggerExtension(  
    IScriptObject scriptObject  
)
```

Parameters

scriptObject

Type: IScriptObject

See Also

[ApplicationLoggerExtension Class](#)

[SchneiderElectric.Scripting.Extensions.ApplicationLogger Namespace](#)

ApplicationLoggerExtension.ApplicationLoggerExtension Methods

The [ApplicationLoggerExtension](#) type exposes the following members.

Methods

	Name	Description
	add_application_logger	Adds a new application logger object to the application.

See Also

[ApplicationLoggerExtension Class](#)

[SchneiderElectric.Scripting.Extensions.ApplicationLogger Namespace](#)

ApplicationLoggerExtension.add_application_logger Method

Adds a new application logger object to the application.

Namespace: [SchneiderElectric.Scripting.Extensions.ApplicationLogger](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public IExtendedObject<IScriptObject> add_application_logger()
```

Return Value

Type: IExtendedObject(IScriptObject)

A script object.

See Also

[ApplicationLoggerExtension Class](#)

[SchneiderElectric.Scripting.Extensions.ApplicationLogger Namespace](#)

IScriptApplicationLoggerObjectMarker Interface

Every **IScriptObject** instance will be extended with this method.

Namespace: [SchneiderElectric.Scripting.Extensions.ApplicationLogger](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptApplicationLoggerObjectMarker
```

The **IScriptApplicationLoggerObjectMarker** type exposes the following members.

Properties

	Name	Description
	IScriptApplicationLoggerObjectMarker.is_application_logger Property	Retrieves a value indicating whether this instance is an application logger object.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Extensions.ApplicationLogger Namespace](#)

IScriptApplicationLoggerObjectMarker.IScriptApplicationLoggerObjectMarker Properties

The [IScriptApplicationLoggerObjectMarker](#) type exposes the following members.

Properties

	Name	Description
	is_application_logger	Retrieves a value indicating whether this instance is an application logger object.

See Also

[IScriptApplicationLoggerObjectMarker Interface](#)

[SchneiderElectric.Scripting.Extensions.ApplicationLogger Namespace](#)

IScriptApplicationLoggerObjectMarker.is_application_logger Property

Retrieves a value indicating whether this instance is an application logger object.

Namespace: [SchneiderElectric.Scripting.Extensions.ApplicationLogger](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool is_application_logger { get; }
```

Property Value

Type: [Boolean](#)

`true` if this instance is application logger object; otherwise, `false`.

See Also

[IScriptApplicationLoggerObjectMarker Interface](#)

Chapter 5

SchneiderElectric.Scripting.Extensions.ParameterList Namespace

This namespace contains extensions methods to the modify parameter list objects.

Interfaces

Interface	Description
IScriptParameterListObject	Functionality for manipulating parameter list objects.
IScriptParameterListObjectMarker	Every IScriptObject instance will be extended with this method.

IScriptParameterListObject Interface

Functionality for manipulating parameter list objects.

Namespace: [SchneiderElectric.Scripting.Extensions.ParameterList](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptParameterListObject :  
IScriptParameterListObjectMarker
```

The **IScriptParameterListObject** type exposes the following members.

Properties

	Name	Description
	IScriptParameterListObject.devices Property	Retrieves a list of all devices, configured in the parameter list.
	IScriptParameterListObject.parameters Property	Retrieves a list of all parameters, configured in the parameter list.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Extensions.ParameterList Namespace](#)

IScriptParameterListObject.IScriptParameterListObject Properties

The [IScriptParameterListObject](#) type exposes the following members.

Properties

	Name	Description
	devices	Retrieves a list of all devices, configured in the parameter list.
	parameters	Retrieves a list of all parameters, configured in the parameter list.

See Also

[IScriptParameterListObject Interface](#)

[SchneiderElectric.Scripting.Extensions.ParameterList Namespace](#)

IScriptParameterListObject.devices Property

Retrieves a list of all devices, configured in the parameter list.

Namespace: [SchneiderElectric.Scripting.Extensions.ParameterList](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptList2<IExtendedObject<IScriptObject>> devices { get; }
```

Property Value

Type: [IScriptList2\(IExtendedObject\(IScriptObject\)\)](#)

Examples

This example shows how to modify a parameter list.

Python

```
p = projects.primary
app = p.active_application

# find the parameter list 'ParameterList'
parameter_list = app.find('ParameterList', True)[0]

# check if the object is actually a parameter list
if parameter_list.is_parameter_list:
    # add 4 devices to the parameter list
    parameter_list.devices.add(p.find('DI_0', True)[0])
    parameter_list.devices.add(p.find('DI_1', True)[0])
    parameter_list.devices.add(p.find('DI_2', True)[0])
    parameter_list.devices.add(p.find('DI_3', True)[0])

    # add some parameters to the parameter list
    parameter_list.parameters.add('Value')
```

```
parameter_list.parameters.add('Filter')
parameter_list.parameters.add('LogAdr')

print('Settings of %s:' % (parameter_list.get_name(True)))
print('Number of devices: %s' % (parameter_list.devices.count))
print('Number of parameters: %s' %
(parameter_list.parameters.count))
print('')

print('List of devices:')
for device in parameter_list.devices:
    print(device.get_name(True))

print('')
print('List of parameters:')
for parameter in parameter_list.parameters:
    print(parameter)
```

See Also

[*IScriptParameterListObject Interface*](#)

IScriptParameterListObject.parameters Property

Retrieves a list of all parameters, configured in the parameter list.

Namespace: [SchneiderElectric.Scripting.Extensions.ParameterList](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptList2<string> parameters { get; }
```

Property Value

Type: [IScriptList2\(String\)](#)

Examples

This example shows how to modify a parameter list.

Python

```
p = projects.primary
app = p.active_application

# find the parameter list 'ParameterList'
parameter_list = app.find('ParameterList', True)[0]

# check if the object is actually a parameter list
if parameter_list.is_parameter_list:
    # add 4 devices to the parameter list
    parameter_list.devices.add(p.find('DI_0', True)[0])
    parameter_list.devices.add(p.find('DI_1', True)[0])
    parameter_list.devices.add(p.find('DI_2', True)[0])
    parameter_list.devices.add(p.find('DI_3', True)[0])

    # add some parameters to the parameter list
    parameter_list.parameters.add('Value')
```

```
parameter_list.parameters.add('Filter')
parameter_list.parameters.add('LogAdr')

print('Settings of %s:' % (parameter_list.get_name(True)))
print('Number of devices: %s' % (parameter_list.devices.count))
print('Number of parameters: %s' %
(parameter_list.parameters.count))
print('')

print('List of devices:')
for device in parameter_list.devices:
    print(device.get_name(True))

print('')
print('List of parameters:')
for parameter in parameter_list.parameters:
    print(parameter)
```

Chapter 6

SchneiderElectric.Scripting.Extensions.ScriptApplication Namespace

This namespace contains extensions of the `IScriptApplication` type of the existing CODESYS ScriptEngine API.

Classes

Class	Description
 TaskHandlingExtension	Legacy interface for task objects. This remains for compatibility reasons to previous versions. The official API is now provided directly by CODESYS.

Interfaces

Interface	Description
 IScriptApplicationBuilder	This interface can be used to read and modify the application build properties.
 IScriptApplicationExtension	This interface can be used to read and modify various application properties.
 IScriptDeploymentStatusExtension	This interface can be used to determine the deployment status of an application on a target device.
 IScriptVisuObjectContainer	This allows to create visu objects; the methods will be available in the project root as well as applications, and folders below them.

TaskHandlingExtension Class

Legacy interface for task objects. This remains for compatibility reasons to previous versions. The official API is now provided directly by CODESYS.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Extensions.ScriptApplication.TaskHandlingExtension

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptApplication](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public sealed class TaskHandlingExtension
```

The **TaskHandlingExtension** type exposes the following members.

Constructors

	Name	Description
	TaskHandlingExtension Constructor	Initializes a new instance of the TaskHandlingExtension class.

Methods

	Name	Description
	TaskHandlingExtension.add_cyclic_task Method	Adds a new cyclic task to the application. The cyclic task will be processed cyclic according to the time definition (task cycle time) given in the property Interval .

See Also

[SchneiderElectric.Scripting.Extensions.ScriptApplication Namespace](#)

TaskHandlingExtension.TaskHandlingExtension Methods

The [TaskHandlingExtension](#) type exposes the following members.

Methods

	Name	Description
	add_cyclic_task	Adds a new cyclic task to the application. The cyclic task will be processed cyclic according to the time definition (task cycle time) given in the property Interval .

See Also

[TaskHandlingExtension Class](#)

[SchneiderElectric.Scripting.Extensions.ScriptApplication Namespace](#)

TaskHandlingExtension.add_cyclic_task Method

Adds a new cyclic task to the application. The cyclic task will be processed cyclic according to the time definition (task cycle time) given in the property **Interval**.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptApplication](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void add_cyclic_task(
    string name
)
```

Parameters

name

Type: [System.String](#)

The name of the new task.

Exceptions

Exception	Condition
ArgumentException	name is null or empty.

Examples

This example shows how to add a new task to an existing application.

Python

```
p = projects.primary
app = p.active_application
```

```
# create a new task with the name 'TASK_SR_Test'  
app.add_cyclic_task('TASK_SR_Test')
```

IScriptApplicationBuildProperties Interface

This interface can be used to read and modify the application build properties.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptApplication](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptApplicationBuildProperties
```

The **IScriptApplicationBuildProperties** type exposes the following members.

Properties

Name	Description
 IScriptApplicationBuildProperties.download_application_content Property	Retrieves or sets a boolean value indicating whether application content is downloaded.
 IScriptApplicationBuildProperties.size_for_dynamic_memory Property	Retrieves or sets the maximum size of memory to use for dynamic memory allocation in bytes.
 IScriptApplicationBuildProperties.use_dynamic_memory Property	Retrieves or sets a boolean value indicating whether to use dynamic memory allocation.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[*SchneiderElectric.Scripting.Extensions.ScriptApplication Namespace*](#)

IScriptApplicationBuildProperties.IScriptApplicationBuildProperties Properties

The [IScriptApplicationBuildProperties](#) type exposes the following members.

Properties

	Name	Description
	download_application_content	Retrieves or sets a boolean value indicating whether application content is downloaded.
	size_for_dynamic_memory	Retrieves or sets the maximum size of memory to use for dynamic memory allocation in bytes.
	use_dynamic_memory	Retrieves or sets a boolean value indicating whether to use dynamic memory allocation.

```
public interface IScriptDeploymentStatusExtension
```

Methods

	Name	Description
 	IScriptDeploymentStatusExtension.get_deployment_status Method	Compares the application of the loaded project against the one on the target device and returns which deployment action needs to be taken at the next login. This method uses the configured target address on the device communication page.
 	IScriptDeploymentStatusExtension.get_deployment_status Method (String)	Compares the application of the loaded project against the one on the target device and returns which deployment action needs to be taken at the next login.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

IScriptDeploymentStatusExtension.get_deployment_status Method

Compares the application of the loaded project against the one on the target device and returns which deployment action needs to be taken at the next login. This method uses the configured target address on the device communication page.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptApplication](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
ApplicationDeploymentStatus get_deployment_status()
```

Return Value

Type: **ApplicationDeploymentStatus**

The required deployment action at the next login to the device.

Examples

This example shows how to retrieve the deployment status of the active application.

Python

```
# Script shows how to retrieve the deployment status of the active
application.
# We enable the new Python 3 print syntax
from __future__ import print_function

if not projects.primary:
    system.ui.error('No primary project set')

proj = projects.primary

# Get active application
app = proj.active_application
```

```
# Get application deployment status via configured target address on
# the device communication page
deployment_status = app.get_deployment_status()

if (deployment_status ==
ApplicationDeploymentStatus.DownloadRequired):
    print("A full download of the application is required")
elif (deployment_status ==
ApplicationDeploymentStatus.OnlineChange):
    print("An online change can be applied")
else:
    print("Application on the device is up to date")

# Get application deployment status via custom target URL
print(app.get_deployment_status('etcp3://127.0.0.1'))
```

IScriptDeploymentStatusExtension.get_deployment_status Method (String)

Compares the application of the loaded project against the one on the target device and returns which deployment action needs to be taken at the next login.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptApplication](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
ApplicationDeploymentStatus get_deployment_status(  
    string URL  
)
```

Parameters

URL

Type: [System.String](#)

The address to the target device.

Return Value

Type: **ApplicationDeploymentStatus**

The required deployment action at the next login to the device.

Examples

This example shows how to retrieve the deployment status of the active application.

Python

```
# Script shows how to retrieve the deployment status of the active application.  
# We enable the new Python 3 print syntax  
from __future__ import print_function  
  
if not projects.primary:  
    system.ui.error('No primary project set')  
  
proj = projects.primary  
  
# Get active application  
app = proj.active_application  
  
# Get application deployment status via configured target address on the device communication page  
deployment_status = app.get_deployment_status()  
  
if (deployment_status ==  
ApplicationDeploymentStatus.DownloadRequired):  
    print("A full download of the application is required")  
elif (deployment_status ==  
ApplicationDeploymentStatus.OnlineChange):  
    print("An online change can be applied")  
else:  
    print("Application on the device is up to date")  
  
# Get application deployment status via custom target URL

IScriptVisuObjectContainer Interface

This allows to create visu objects, the methods will be available in the project root as well as applications, and folders below them.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptApplication](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptVisuObjectContainer
```

The **IScriptVisuObjectContainer** type exposes the following members.

Methods

Name	Description
 IScriptVisuObjectContainer.create_empty_visu Method	Creates an empty Visualization with the specified name.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

IScriptVisuObjectContainer.create_empty_visu Method

Creates an empty Visualization with the specified name.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptApplication](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_empty_visu(  
    string name  
)
```

Parameters

name

Type: [System.String](#)

The name.

Return Value

Type: [IExtendedObject\(IScriptObject\)](#)

The **IScriptObject** of the newly created Visualization.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under this parent.

Chapter 7

SchneiderElectric.Scripting.Extensions.ScriptDeviceObject Namespace

This namespace contains extensions of the ScriptDeviceObject type of the existing CODESYS ScriptEngine API.

Classes

Class	Description
 CommunicationExtension	Provides methods for communication-related settings and functions of a device.
 ConvertExtension	This extension provides methods for testing and converting a device or device module.
 DeviceIdDto	Implements IDeviceId and is used for returning device information to scripts. Additionally, provide another field for the ModuleId, because there is no matching IModuleId in the 3S Python API.
 DevicePropertiesExtension Class	This class is an extension object of CoDeSys IScriptDeviceObject. Click on the class name to see all members.

Interfaces

Interface	Description
 IScriptChildDevicesExtension Interface	Interface to get all child devices that can be appended to a device or project.
 IScriptDriverInfo Interface	This interface provides access to all information needed in order to properly configure the driver and supporting objects of a device or connector.
 IScriptVariableMapping Interface	Defines the mapping of a data element on a specific variable.

CommunicationExtension Class

Provides methods for communication-related settings and functions of a device.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Extensions.ScriptDeviceObject.CommunicationExtension

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class CommunicationExtension
```

The **CommunicationExtension** type exposes the following members.

Methods

	Name	Description
 CommunicationExtension.get_communication_address Method		Retrieves the communication address of the PLC.
 CommunicationExtension.reboot_plc Method		Reboots the PLC.
 CommunicationExtension.reset_diagnosis_messages Method		Resets the diagnosis messages of the controller.
 CommunicationExtension.set_communication_address Method		Sets the communication address of the PLC. This can be an IP Address, a

	nodename or full qualified connection URL.
--	--

See Also

[*SchneiderElectric.Scripting.Extensions.ScriptDeviceObject Namespace*](#)

CommunicationExtension.CommunicationExtension Methods

The [CommunicationExtension](#) type exposes the following members.

Methods

	Name	Description
	get_communication_address	Retrieves the communication address of the PLC.
	reboot_plc	Reboots the PLC.
	reset_diagnosis_messages	Resets the diagnosis messages of the controller.
	set_communication_address	Sets the communication address of the PLC. This can be an IP Address, a nodename or full qualified connection URL.

See Also

[CommunicationExtension Class](#)

[SchneiderElectric.Scripting.Extensions.ScriptDeviceObject Namespace](#)

CommunicationExtension.get_communication_address Method

Retrieves the communication address of the PLC.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string get_communication_address()
```

Return Value

Type: [String](#)

The communication Address. This can be an IP Address, a nodename or full qualified connection URL. Examples: - 192.168.2.25 - MyController - etcp3://192.168.2.25 - etcp3://10.128.154.12:1105,192.168.2.25 - enodename3://10.128.154.12:1105,MyController - etcp3://[10.128.154.12:1217],192.168.2.25 - enodename3://[10.128.154.12:1217],MyController

Examples

This example shows an example of getting the address.

Python

```
from __future__ import print_function

def main():
    if not projects.primary:
        system.ui.error("No active project.")
        return

    project = projects.primary
    # locating the controller named 'LMC'
    controller = project.find('LMC', True)[0]
    address = controller.get_communication_address()
```

```
print(address)
system.ui.info("Test complete")

main()
```

See Also

CommunicationExtension.reboot_plc Method

Reboots the PLC.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void reboot_plc()
```

Remarks

This function requires the application to be logged in

Examples

This example shows an example of rebooting the PLC.

Python

```
from __future__ import print_function

def perform_application_login(project):
    app = project.active_application
    onlineapp = online.create_online_application(app)
    onlineapp.login(OnlineChangeOption.Try, True)

def main():
    if not projects.primary:
        system.ui.error("No active project.")
        return

    perform_application_login(project)
    #find the controller named 'LMC' which shall be rebooted
    controller = project.find('LMC', True)[0]
    #reboot the controller
    controller.reboot_plc()
```

```
system.ui.info("Test complete")  
main()
```

CommunicationExtension.reset_diagnosis_messages Method

Resets the diagnosis messages of the controller.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void reset_diagnosis_messages()
```

Remarks

This function requires the application to be logged in

Examples

This example shows an example of resetting the diagnosis messages of a controller

Python

```
from __future__ import print_function

def perform_application_login(project):
    app = project.active_application
    onlineapp = online.create_online_application(app)
    onlineapp.login(OnlineChangeOption.Try, True)

def main():
    if not projects.primary:
        system.ui.error("No active project.")
        return

    project = projects.primary
    perform_application_login(project)
    #find the controller which msgs shall be resetted
    controller = project.find('LMC', True)[0]
```

```
#reset the diag msgs
controller.reset_diagnosis_messages()
system.ui.info("Test complete")

main()
```

CommunicationExtension.set_communication_address Method

Sets the communication address of the PLC. This can be an IP Address, a nodename or full qualified connection URL.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void set_communication_address(  
    string address  
)
```

Parameters

address

Type: [System.String](#)

The communication address in one of the following notations: - 192.168.2.25

- MyController - etcp3://192.168.2.25 -

etcp3://10.128.154.12:1105,192.168.2.25 -

enodename3://10.128.154.12:1105,MyController -

etcp3://[10.128.154.12:1217],192.168.2.25 -

enodename3://[10.128.154.12:1217],MyController

Examples

This example shows an example of setting an IP address.

Python

```
from __future__ import print_function  
  
def main():  
    if not projects.primary:  
        system.ui.error("No active project.")
```

```
return

project = projects.primary
#find the controller by the object name where address should be
set and read.
controller = project.find('LMC', True)[0]
#reboot the controller
controller.set_communication_address('192.168.2.25')
#read address back and show it.
print('get_communication_address:= ' +
controller.get_communication_address())
system.ui.info("Test complete")

main()
```

ConvertExtension.can_convert Method (IDeviceId, String)

Verifies whether the device can be converted to another specific device or module.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public bool can_convert(
    IDeviceId targetDeviceId,
    string targetModuleId = null
)
```

Parameters

targetDeviceId

Type: IDeviceId

The target device id.

targetModuleId (Optional)

Type: [System.String](#)

The target module id (optional).

Return Value

Type: [Boolean](#)

True if the conversion is possible, false otherwise

Remarks

If a module shall be checked, pass a valid *targetModuleId*, otherwise leave it

null.

Examples

This example shows how to verify whether a validation would be possible.

Python

```
from __future__ import print_function

# define the device id for the parameters
x01c = DeviceID(4096, "1003 009D", "1.36.2.6")
lxm52 = DeviceID(4096, "1003 0082", "1.50.0.4")
lxm52Id = "LXM52"

def main():
    if not projects.primary:
        system.ui.error("No active project.")

ConvertExtension.get_preferred_alternative_devices Method

Retrieves the preferred alternative DeviceIDs for the current device.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public IList<IDeviceId> get_preferred_alternative_devices()
```

Return Value

Type: [IList\(IDeviceId\)](#)

A list of DeviceIDs

Examples

This example shows an example of getting a list of alternative devices for a given device.

Python

```
from __future__ import print_function

#help function to print the delivered device ids
def deviceid_to_string(devId):
    mystr = "ID: {0.id} Type: {0.type} Version: {0.version}".format(devId)
    if hasattr(devId, 'module_id') and devId.module_id is not None:
        mystr += " ModuleID: {0.module_id}".format(devId)
    return mystr

def main():
    if not projects.primary:
        system.ui.error("No active project.")
    return
```

```
proj = projects.primary

controller = proj.find('LMC', True)[0]
alternativeControllers =
controller.get_preferred_alternative_devices()
print("ALTERNATIVE DEVICES FOR LMC")
for id in alternativeControllers:
    print(deviceid_to_string(id))

drive = proj.find('drive', True)[0]
alternativeDrives = drive.get_preferred_alternative_devices()
print("ALTERNATIVE DEVICES FOR DRIVE")
for id in alternativeDrives:
    print(deviceid_to_string(id))

system.ui.info("Test complete. Please check the script output
window")

main()
```

DeviceIdDto Class

Implements IDeviceId and is used for returning device information to scripts. Additionally, provides another field for the ModuleId, because there is no matching IModuleId in the 3S Python API.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Extensions.ScriptDeviceObject.DeviceIdDto

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class DeviceIdDto : IDeviceId
```

The **DeviceIdDto** type exposes the following members.

Properties

	Name	Description
	DeviceIdDto.id Property	Retrieves the device id code.
	DeviceIdDto.module_id Property	Retrieves the module id if this is a module.
	DeviceIdDto.type Property	Retrieves the device type.
	DeviceIdDto.version Property	Retrieves the device version.

SchneiderElectric.Scripting.Extensions.ScriptDeviceObject.DeviceProperties Extension

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class DevicePropertiesExtension
```

The **DevicePropertiesExtension** type exposes the following members.

Properties

	Name	Description
	DevicePropertiesExtension.driver_info_ext Property	This property provides access to all information needed to properly configure the driver and supporting objects of the connector.

Methods

	Name	Description
--	------	-------------

	DevicePropertiesExtension.get_all_parameters Method	Retrieve all parameters from a device.
	DevicePropertiesExtension.get_parameter Method	Get a specific parameter by identifier and connector id.
	DevicePropertiesExtension.get_parameter_iec_address Method	Retrieves the IEC address where to map this item in the process image.
	get_parameter_io_variable_mapping(Int64, Int32)	Retrieves the mapping of a data element on a specific variable. If a variable mapping is defined, an instance of IScriptVariableMapping will be returned. If no variable mapping is defined, <code>null</code> (<code>None</code> in Python) will be returned.
	get_parameter_io_variable_mapping(Int64, Int32, Int32)	Retrieves the mapping of a data element (sub-element) on a specific variable. If a variable mapping is defined, an instance of IScriptVariableMapping will be returned. If no variable mapping is defined, <code>null</code> (<code>None</code> in Python) will be returned.

 <u>set_parameter</u>	This function is used to set a specific offline parameter value.
 <u>set_parameter_iec_address</u>	Sets the IEC address where to map this item in the process image.
 <u>DevicePropertiesExtension.set_parameter_io_variable_mapping Method (Int64, Int32, String, Boolean)</u>	Defines the mapping of a data element on a specific variable.
 <u>DevicePropertiesExtension.set_parameter_io_variable_mapping Method (Int64, Int32, Int32, String, Boolean)</u>	Defines the mapping of a data element (sub-element) on a specific variable.

[DevicePropertiesExtension Class](#)

[SchneiderElectric.Scripting.Extensions.ScriptDeviceObject Namespace](#)

DevicePropertiesExtension.get_all_parameters Method

Retrieve all parameters from a device.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public IEnumerable<IDataElement> get_all_parameters()
```

Return Value

Type: [IEnumerable\(IDataElement\)](#)

Method returns an IEnumerable that contains all parameters of the device.

Remarks

Each entry in the list represents an IParameter object. All members of this object can be found in CoDeSys API description.

Examples

This example shows how to retrieve a list with all parameters from a device.

Python

```
# Script searches for a specific device and prints all parameters
# We enable the new Python 3 print syntax
from __future__ import print_function

# The path to our project
project_path = r"D:\PythonProjects\GetAllParameters.project"

# Clean up any open project:
if projects.primary:
    projects.primary.close()
```

```
# Load the project
proj = projects.open(project_path);

# Set the project as primary project
proj = projects.primary

# Define the printing function
def printtree(treeobj, depth=0):

    # Check if the treeobj is a device
    if treeobj.is_device:
        # Get the not localized name of the device
        device_name = treeobj.get_name(False)

        # If name matches the device name that we want...
        if device_name == "DRV_Lexium62":

            # Call the get_all_parameters() function, to get a
            # complete list of all parameters of that device object.
            # A parameter can contain subparameter, which can be
            # checked with .HasSubElements property
            parameter_list = treeobj.get_all_parameters()

            # prints all parameters
            for parameter in parameter_list:
                print("ID: " + parameter.Identifier + " Name: " +
parameter.VisibleName + " Value: " + parameter.Value + "
ParameterSet: " +
str((parameter.GetAssociatedConnector).ConnectorId))

            # Retrieve all child object, if get_children(True) and call the
            # printtree function recursivley
            for child in treeobj.get_children(False):
                printtree(child, depth+1)

    # Retrieve all objects in the device tree
    objects = proj.get_children()

    # Call the printtree function for each object in the device tree
    for singleobject in objects:
        printtree(singleobject)
```

DevicePropertiesExtension.get_parameter Method

Get a specific parameter by identifier and connector id.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public IDataElement get_parameter (
    long identifier,
    int connectorID
)
```

Parameters

identifier

Type: [System.Int64](#)

Unique identifier of this data element within the parent element.

connectorID

Type: [System.Int32](#)

The connector id for a specific parameter.

Return Value

Type: **IDataElement**

An element that specifies a value. Base type for Parameter objects and interface of all subcomponents of a parameter. May be a structured type itself and in turn contain other data elements.

Remarks

If you do not know the identifier and the connector ID, you can call the `get_all_parameters()` method to identify them. All members of this object can be found in CoDeSys API description.

Examples

This example shows how to retrieve a specific parameter from a device.

Python

```
# Script searches for a specific device and prints all parameters
# We enable the new Python 3 print syntax
from __future__ import print_function

# The path to our project
project_path = r"D:\PythonProjects\GetParameter.project"

# Clean up any open project:

)
```

Parameters

identifier

Type: [System.Int64](#)

Unique identifier of this data element within the parent element.

connectorId

Type: [System.Int32](#)

The connector id for a specific parameter.

Return Value

Type: [String](#)

The IEC address of the specified parameter.

Exceptions

Exception	Condition
-----------	-----------

ArgumentOutOfRangeException	A parameter with the specified identifier and connectorId does not exist.

Syntax

C#

```
public IScriptVariableMapping get_parameter_io_variable_mapping(  
    long identifier,  
    int connectorId,  
    int subElementIndex  
)
```

Parameters

identifier

Type: [System.Int64](#)

Unique identifier of this data element within the parent element.

connectorId

Type: [System.Int32](#)

The connector id for a specific parameter.

subElementIndex

Type: [System.Int32](#)

Zerobased index of the sub-element to get or set.

Return Value

Type: [IScriptVariableMapping](#)

The variable mapping of the specified parameter or `null` (`None` in Python) if no mapping is defined.

Exceptions

Exception	Condition
ArgumentOutOfRangeException	A parameter with the specified identifier and connectorId does not exist.
IndexOutOfRangeException	Thrown if subElementIndex is smaller then zero or greater then the number of sub-elements in the specified parameter.

Examples

This example shows how to modify the IO mapping of a specific device parameter.

Python

```
# Script searches for a specific device and prints all parameters
# We enable the new Python 3 print syntax
from __future__ import print_function

# The path to our project

DevicePropertiesExtension.set_parameter Method

This function is used to set a specific offline parameter value.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void set_parameter(  
    IParameter parameter,  
    string value  
)
```

Parameters

parameter

Type: IParameter

The parameter whose offline value should be changed.

value

Type: [System.String](#)

The new offline value of the parameter.

Remarks

If the parameter is null an ArgumentNullException is raised. If present, the device editor is also updated (GUI mode only).

Examples

This example shows how to set a specific parameter value from a device.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

# The path to our project
project_path = r"D:\PythonProjects\SetParameter.project"

# Clean up any open project:
if projects.primary:
    projects.primary.close()

# Load the project
proj = projects.open(project_path);

# Set the project as primary project
proj = projects.primary

# To set a parameter you need a device, a parameter and a new value
# that should be assigned to the parameter
# At first we search for the SERCOSIII node...
sercosNode = proj.find('SERCOSIII', True)[0]

# Add a new device named Robot_XK29 to the SERCOSIII node, we assume
# that no other device is below the SERCOSIII node, otherwise the
# index must be changed
sercosNode.insert("Robot_XK29", 0, DeviceID(4096, "1003 0082",
"1.36.2.2"), 'LXM62DxS')

# Now we get the children of the SERCOS node, we assume that
# Robot_XK29 is the only one, otherwise the index must be changed
Robot_XK29 = sercosNode.get_children(True)[0]

# Call the get_all_parameters() function, to get a complete list of
# all parameters of that device object.
# A parameter can contain subparameter, which can be checked with
# .HasSubElements property
parameter_list = treeobj.get_all_parameters()

# prints all parameters
for parameter in parameter_list:
    print("ID: " + parameter.Identifier + " Name: " +
parameter.VisibleName + " Value: " + parameter.Value + "
ParameterSet: " +
```

```
str((parameter.GetAssociatedConnector).ConnectorId))

# We get the WorkingMode parameter:
# ID: 191 Name: WorkingMode Value: 1 ParameterSet: 1
working_mode = Robot_XK29.get_parameter(191, 1)

# Finally we set the WorkingMode parameter to 2 = Deactivated
Robot_XK29.set_parameter(working_mode, "2")
```

[*SchneiderElectric.Scripting.Extensions.ScriptDeviceObject Namespace*](#)

DevicePropertiesExtension.set_parameter_iec_address Method

Sets the IEC address where to map this item in the process image.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void set_parameter_iec_address (
    long identifier,
    int connectorId,
    string iecAddress
)
```

Parameters

identifier

Type: [System.Int64](#)

Unique identifier of this data element within the parent element.

connectorId

Type: [System.Int32](#)

The connector id for a specific parameter.

iecAddress

Type: [System.String](#)

The new IEC address for the specified parameter. If `null` (`None` in Python) is passed, the IEC address is assigned automatically.

Exceptions

Exception	Condition
ArgumentOutOfRangeException	A parameter with the specified identifier and connectorId does not exist.

Examples

This example shows how to modify the IEC address of a specific device parameter.

Python

```
# Script searches for a specific device and prints all parameters
# We enable the new Python 3 print syntax
from __future__ import print_function

# The path to our project
project_path =
r"D:\PythonProjects\ModifyParameterIecAddress.project"

# Clean up any open project:
if projects.primary:
    projects.primary.close()

# Load the project
proj = projects.open(project_path);

# Set the project as primary project
proj = projects.primary

# Search a specific device in the project by name
device = proj.find('_1_byte_input_0x10_', True)[0]

# If device is found, read the current IEC address and modify it
if device != None:
    # Read the IEC address of the 'Input0' parameter / channel; ID: 1, ConnectorId: 1
    iec_address = device.get_parameter_iec_address(1, 1)
    print(iec_address)

    # Set the IEC address of the 'Input0' parameter / channel to '%IB3' and print out the new value to validate the operation
    device.set_parameter_iec_address(1, 1, '%IB3')
```

```
iec_address = device.get_parameter_iec_address(1, 1)
print(iec_address)
```

DevicePropertiesExtension.set_parameter_io_variable_mapping Method (Int64, Int32, String, Boolean)

Defines the mapping of a data element on a specific variable.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void set_parameter_io_variable_mapping(
    long identifier,
    int connectorId,
    string variable,
    bool createVariable = false
)
```

Parameters

identifier

Type: [System.Int64](#)

Unique identifier of this data element within the parent element.

connectorId

Type: [System.Int32](#)

The connector id for a specific parameter.

variable

Type: [System.String](#)

The name of the variable on which the value should be mapped. If `null` (`None` in Python) is passed, the current mapping is removed.

createVariable (Optional)

Type: [System.Boolean](#)

Describes whether a new variable should be created or the channel is mapped on an existing variable. (This parameter is optional, default = `false`)

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void set_parameter_io_variable_mapping(
    long identifier,
    int connectorId,
    int subElementIndex,
    string variable,
    bool createVariable = false
)
```

Parameters

identifier

Type: [System.Int64](#)

Unique identifier of this data element within the parent element.

connectorId

Type: [System.Int32](#)

The connector id for a specific parameter.

subElementIndex

Type: [System.Int32](#)

Zerobased index of the sub-element to get or set.

variable

Type: [System.String](#)

The name of the variable on which the value should be mapped. If `null` (`None` in Python) is passed, the current mapping is removed.

createVariable (Optional)

Type: [System.Boolean](#)

Describes whether a new variable should be created or the channel is mapped on an existing variable. (This parameter is optional, default = `false`)

IScriptChildDevicesExtension.get_allowed_child_devices Method

Retrieve all the child devices that can be appended to this device or project.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptDeviceObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptDeviceCollection get_allowed_child_devices(  
    bool filterNewestVersions = true  
)
```

Parameters

filterNewestVersions (Optional)

Type: [System.Boolean](#)

If set to true, only the newest version of each device is returned. This parameter is optional, the default value is true.

Return Value

Type: **IScriptDeviceCollection**

A device collection of possible child devices.

Remarks

Each entry in the list represents an IScriptDeviceDescription object. All members of this object can be found in CoDeSys API description.

Examples

This example shows how to retrieve a list with all allowed child devices from a device.

Python

```
# Script creates an empty project and prints all possible devices
# that can be appended on top level
# We enable the new Python 3 print syntax
from __future__ import print_function

import os

## Close current project
if projects.primary:
    projects.primary.close()

## Create an empty project
proj =
projects.create(os.path.expanduser("~\\Documents\\GetAllowedChildDevices.project"))

# Define the printing function
def printdevices(devicelist):
    # prints all devices
    for device in devicelist:
        print("Name: " + device.device_info.name + " Version: " +
device.device_id.version)

# Retrieve all possible devices on project level
devicelist = proj.get_allowed_child_devices()

# Call the printdevices function
printdevices(devicelist)
```

Chapter 8

SchneiderElectric.Scripting.Extensions.ScriptLibManObject Namespace

This namespace contains extensions of the IScriptLibMan type of the existing CODESYS ScriptEngine API.

Classes

	Class	Description
	LibraryConfigurationExtension Class	Library Extensions for IScriptApplication (based on IScriptObject) and IScriptProject.

LibraryConfigurationExtension Class

Library Extensions for IScriptApplication (based on IScriptObject) and IScriptProject

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Extensions.ScriptLibManObject.LibraryConfigurationExtension

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptLibManObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class LibraryConfigurationExtension
```

The **LibraryConfigurationExtension** type exposes the following members.

Methods

	Name	Description
	get_invalid_library_mappings	Retrieves a list with full names of libraries which have references that cause conflicts.
	is_current_mapping_valid	Verifies whether the current mapping of the library references is valid.
	is_library_forward_compatible	Verifies whether the given library is a forward compatible library.

	<u>make_auto_mapping</u>	Automatically map and update all libraries to the best matching versions.
	<u>LibraryConfigurationExtension.set_new_library_version</u> <u>Method (String, String)</u>	Explicitly sets a specific version mapping for the given library.
	<u>LibraryConfigurationExtension.set_new_library_version</u> <u>Method (String, String, String)</u>	Explicitly sets a specific version mapping for the given library.

[LibraryConfigurationExtension Class](#)

[SchneiderElectric.Scripting.Extensions.ScriptLibManObject Namespace](#)

LibraryConfigurationExtension.get_invalid_library_mappings Method

Retrieves a list with full names of libraries which have references that cause conflicts.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptLibManObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string[] get_invalid_library_mappings()
```

Return Value

Type: [String\[\]](#)

A list with full names of the libraries in conflict state

Examples

This example shows how to retrieve invalid mappings from project and application

Python

```
p = projects.primary
libmgr = p.get_library_manager()
print("Checking project library mappings")
if not libmgr.is_current_mapping_valid():
    for lib in libmgr.get_invalid_library_mappings():
        print("Library reference cannot be satisfied for: " + lib)
else:
    print("All mappings valid")

app = p.active_application
libmgr = app.get_library_manager()
print("Checking application library mappings")
if not libmgr.is_current_mapping_valid():
    for lib in libmgr.get_invalid_library_mappings():
        print("Library reference cannot be satisfied for: " + lib)
```

```
        print("Library reference cannot be satisfied for: " + lib)
else:
    print("All mappings valid")
```

See Also

[*LibraryConfigurationExtension Class*](#)

[*SchneiderElectric.Scripting.Extensions.ScriptLibManObject Namespace*](#)

LibraryConfigurationExtension.is_current_mapping_valid Method

Verifies whether the current mapping of the library references is valid.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptLibManObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public bool is_current_mapping_valid()
```

Return Value

Type: [Boolean](#)

True if all mappings are valid, false otherwise

Examples

This example shows how to validate mappings and retrieve the invalid mappings.

Python

```
p = projects.primary
libmgr = p.get_library_manager()
print("Checking project library mappings")
if not libmgr.is_current_mapping_valid():
    for lib in libmgr.get_invalid_library_mappings():
        print("Library reference cannot be satisfied for: " + lib)
else:
    print("All mappings valid")

app = p.active_application
libmgr = app.get_library_manager()
print("Checking application library mappings")
if not libmgr.is_current_mapping_valid():
    for lib in libmgr.get_invalid_library_mappings():
        print("Library reference cannot be satisfied for: " + lib)
```

```
else:  
    print("All mappings valid")
```

See Also

[*LibraryConfigurationExtension Class*](#)

[*SchneiderElectric.Scripting.Extensions.ScriptLibManObject Namespace*](#)

LibraryConfigurationExtension.is_library_forward_compatible Method

Verifies whether the given library is a forward compatible library.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptLibManObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public bool is_library_forward_compatible(
    string libDisplayName
)
```

Parameters

libDisplayName

Type: [System.String](#)

Display name of the library.

Return Value

Type: [Boolean](#)

`True` if the given library is forward compatible, `false` otherwise

Examples

This example shows iterates through all referenced libraries of the application and verifies whether they are forward compatible

Python

```
p = projects.primary
app = p.active_application
libmgr = app.get_library_manager()
```

```
print("# Checking all libraries:")
for lib in libman.get_libraries():
    print("- " + lib + " Is Forward Compatible Library? " +
+ str(libmgr.is_library_forward_compatible(lib)))
```

LibraryConfigurationExtension.make_auto_mapping Method

Automatically map and update all libraries to the best matching versions.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptLibManObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void make_auto_mapping(
    bool replaceExistingLegacyMappings = false,
    bool reportChanges = false
)
```

Parameters

replaceExistingLegacyMappings (Optional)

Type: [System.Boolean](#)

If `True`, also replace legacy mappings. Default is `False`

reportChanges (Optional)

Type: [System.Boolean](#)

If `True`, updated libraries will be reported to the standard output.

Examples

This example shows how to update all libraries.

Python

```
p = projects.primary
app = p.active_application
libmgr = app.get_library_manager()
```

```
if libmgr.is_current_mapping_valid():
    print("Current mapping is valid")
else:
    print("Updating all libraries")
    libmgr.make_auto_mapping()
```

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptLibManObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void set_new_library_version(
    string libraryFullName,
    string newLibVersion
)
```

Parameters

libraryFullName

Type: [System.String](#)

Full name of the library in the form <Title>, <Version> (<Vendor>)

newLibVersion

Type: [System.String](#)

The new library version. **NULL** (**Python:** `None`) for Legacy

Examples

This example shows the various methods for setting the referenced library version

Python

```
p = projects.primary
app = p.active_application
libmgr = app.get_library_manager()
# set version using individual parameters
libmgr.set_new_library_version("PD_GlobalDiagnostics", "Schneider
Electric", "1.0.1.0")
# set version using the library full name
libmgr.set_new_library_version("PD_AxisModule, 1.1.6.0 (Schneider
Electric)", "1.2.4.0")
# set version to Legacy
libmgr.set_new_library_version("PD_Template", "Schneider Electric",
None)
```

Chapter 9

SchneiderElectric.Scripting.Extensions.ScriptObject Namespace

This namespace contains extensions of the ScriptObject type of the existing CODESYS ScriptEngine API.

Classes

	Class	Description
	PouExtension Class	Class provides access to the interface and implementation text of a POU. Only Statement List is supported as this extension is written for text.

Interfaces

	Interface	Description
	IScriptNetwork Interface	This interface provides access to a specific network of an NWL object.

PouExtension Class

Class provides access to the interface and implementation text of a POU. Only Statement List is supported as this extension is written for text.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Extensions.ScriptObject.PouExtension

Namespace: [Chapter 9 SchneiderElectric.Scripting.Extensions.ScriptObject Namespace](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class PouExtension
```

The **PouExtension** type exposes the following members.

Properties

	Name	Description
	PouExtension.has_nwl_implementation Property	Retrieves a value indicating whether this IScriptObject has a nwl implementation part.
	PouExtension.is_POU Property	Returns true if the object is a POU.

Methods

	Name	Description
	PouExtension.getImplementationText Method	Retrieves the current implementation text.

	<u>PouExtension.get_interface_text Method</u>	Retrieves the current interface text.
	<u>PouExtension.get_network Method</u>	Retrieves a network inside a POU specified by its network number.
	<u>PouExtension.get_networks Method</u>	Retrieves a list of all networks inside a POU.
	<u>PouExtension.remove_network Method</u>	Removes a network inside a POU specified by its network number.
	<u>PouExtension.set_implementation_text Method</u>	Sets the implementation text of the POU.
	<u>PouExtension.set_interface_text Method</u>	Sets the interface text of the POU.

Remarks

This class is exported to Python, and thus adheres to Python naming standards.

Retrieves the current implementation text.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string get_implementation_text()
```

Return Value

Type: [String](#)

Returns a string of the current implementation text.

Examples

This example shows how to retrieve the implementation text of a POU.

Python

```
if not projects.primary:  
    system.ui.error('No primary project set')  
  
p = projects.primary  
pou = p.find('SR_Main', True)[0]  
code = pou.get_implementation_text()  
print(code)

```

The **IScriptNetwork** type exposes the following members.

Properties

	Name	Description
	IScriptNetwork.comment Property	Retrieves or sets the network comment.
	IScriptNetwork.id Property	Retrieves the internal network id.
	IScriptNetwork.label Property	Retrieves or sets the network label.
	IScriptNetwork.network_item_count Property	Retrieves the number of subitems for the network.
	IScriptNetwork.network_number Property	Retrieves the network number.
	IScriptNetwork.out_commented Property	Retrieves or sets a boolean value indicating whether this network is commented out.
	IScriptNetwork.title Property	Retrieves or sets the network title.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

IScriptNetwork.IScriptNetwork Properties

The [IScriptNetwork](#) type exposes the following members.

Properties

Name	Description
 comment	Retrieves or sets the network comment.
 id	Retrieves the internal network id.
 label	Retrieves or sets the network label.
 network_item_count	Retrieves the number of subitems for the network.
 network_number	Retrieves the network number.
 out_commented	Retrieves or sets a boolean value indicating whether this network is commented out or not.
 title	Retrieves or sets the network title.

SchneiderElectric.Scripting.Extensions.ScriptProject.JobListExtension

Namespace: [Chapter 10 SchneiderElectric.Scripting.Extensions.ScriptProject Namespace](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class JobListExtension
```

The **JobListExtension** type exposes the following members.

Constructors

	Name	Description
	JobListExtension Constructor	Initializes a new instance of the UpdateExtension class.

Properties

	Name	Description
	JobListExtension.job_list Property	Provides access to job list objects and job modification API.

See Also

[SchneiderElectric.Scripting.Extensions.ScriptProject Namespace](#)

JobListExtension Constructor

Initializes a new instance of the [UpdateExtension](#) class.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptProject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public JobListExtension(  
    IScriptProject baseObject  
)
```

Parameters

baseObject

Type: IScriptProject

The base object.

Exceptions

Exception	Condition
ArgumentNullException	baseObject is null.

See Also

[JobListExtension Class](#)

[SchneiderElectric.Scripting.Extensions.ScriptProject Namespace](#)

JobListExtension.JobListExtension Properties

The [JobListExtension](#) type exposes the following members.

Properties

Name	Description
 job_list	Provides access to job list objects and job modification API.

See Also

[*JobListExtension Class*](#)

[*SchneiderElectric.Scripting.Extensions.ScriptProject Namespace*](#)

JobListExtension.job_list Property

Provides access to job list objects and job modification API.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptProject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public IScriptJobList job_list { get; }
```

Property Value

Type: [IScriptJobList](#)

See Also

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptProject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class UpdateExtension
```

The **UpdateExtension** type exposes the following members.

Methods

	Name	Description
	UpdateExtension.update Method	Updates all parts of the project to the latest version.

See Also

[SchneiderElectric.Scripting.Extensions.ScriptProject Namespace](#)

UpdateExtension.UpdateExtension Methods

The [UpdateExtension](#) type exposes the following members.

Methods

	Name	Description
	update	Updates all parts of the project to the latest version.

See Also

[UpdateExtension Class](#)

[SchneiderElectric.Scripting.Extensions.ScriptProject Namespace](#)

UpdateExtension.update Method

Updates all parts of the project to the latest version.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptProject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void update()
```

Examples

This example shows how to perform a comparison and print the resulting comparison tree.

Python

```
# make sure that when started interactively, NOT to update the
project when the dialog requests it (click cancel)
p = projects.primary
print("Updating project")
p.update_project()
print("update done")
```

ScriptCyclicTaskObject.add_pou Method

Adds a new POU to the list of controlled POUs.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptTaskObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void add_pou(  
    string pou_name,  
    string comment = null  
)
```

Parameters

pou_name

Type: [System.String](#)

The name of the POU to control.

comment (Optional)

Type: [System.String](#)

An optional comment.

Exceptions

Exception	Condition
ArgumentException	pou_name is null or empty.

See Also

ScriptCyclicTaskObject.remove_pou Method

Removes a controlled POU at the specified index.

Namespace: [SchneiderElectric.Scripting.Extensions.ScriptTaskObject](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void remove_pou(  
    int index  
)
```

Parameters

index

Type: [System.Int32](#)

The zero-based index of the element to remove.

Exceptions

Exception	Condition
ArgumentOutOfRangeException	<i>index</i> is less than 0 -or- <i>index</i> is equal to or greater than Count

Chapter 12

SchneiderElectric.Scripting.Extentions.DeviceIntegration Namespace

This namespace contains extensions of the IScriptDevice type of the existing CODESYS ScriptEngine API.

Interfaces

Interface	Description
IScriptDeviceIntegration Interface	Script object interface for Scripting API attached to a script device object.
IScriptDeviceIntegrationExtension Interface	Scripting API to extend the device script object for Device Integration operations.
IScriptUserFunction Interface	Script object interface for Scripting API of a user function instance attached to a device object.

IScriptDeviceIntegration Interface

Script object interface for Scripting API attached to a script device object.

Namespace: [Chapter 12](#)

[SchneiderElectric.Scripting.Extensions.DeviceIntegration Namespace](#)

Assembly: SchneiderElectric.Programming.DeviceIntegration.Scripting.plugin
(in SchneiderElectric.Programming.DeviceIntegration.Scripting.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptDeviceIntegration
```

The **IScriptDeviceIntegration** type exposes the following members.

Properties

	Name	Description
	IScriptDeviceIntegration.active_user_functions Property	Retrieves the active user functions.
	IScriptDeviceIntegration.all_user_functions Property	Retrieves all available user functions.
	IScriptDeviceIntegration.device_variant Property	Retrieves or sets the device variant.
	IScriptDeviceIntegration.inactive_user_functions Property	Retrieves the inactive user functions.
	IScriptDeviceIntegration.is_supported Property	Retrieves a value indicating whether Device Integration features are supported.

Methods

	Name	Description
--	------	-------------

≡◊	IScriptDeviceIntegration.get_user_function_by_id Method	Retrieves the user function by identifier.
≡◊	IScriptDeviceIntegration.test_dump_information Method	Test API - not for public use.
≡◊	IScriptDeviceIntegration.test_set_user_functions_enabled_state Method	Test API - not for public use.

Assembly: SchneiderElectric.Programming.DeviceIntegration.Scripting.plugin

(in SchneiderElectric.Programming.DeviceIntegration.Scripting.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
void test_set_user_functions_enabled_state(  
    bool enabled  
)
```

Parameters

enabled

Type: [System.Boolean](#)

if set to `true` [enabled].

See Also

[IScriptDeviceIntegration Interface](#)

[SchneiderElectric.Scripting.Extentions.DeviceIntegration Namespace](#)

IScriptDeviceIntegrationExtension Interface

Scripting API to extend the device script object for Device Integration operations.

Namespace: [SchneiderElectric.Scripting.Extentions.DeviceIntegration](#)

Assembly: SchneiderElectric.Programming.DeviceIntegration.Scripting.plugin
(in SchneiderElectric.Programming.DeviceIntegration.Scripting.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptDeviceIntegrationExtension
```

The **IScriptDeviceIntegrationExtension** type exposes the following members.

Properties

	Name	Description
	IScriptDeviceIntegrationExtension.device_integration Property	Retrieves access to device integration scripting API.

See Also

[SchneiderElectric.Scripting.Extentions.DeviceIntegration Namespace](#)

IScriptDeviceIntegrationExtension.IScriptDeviceIntegrationExtension Properties

IScriptUserFunction Interface

Script object interface for Scripting API of a user function instance attached to a device object.

Namespace: [SchneiderElectric.Scripting.Extentions.DeviceIntegration](#)

Assembly: SchneiderElectric.Programming.DeviceIntegration.Scripting.plugin
(in SchneiderElectric.Programming.DeviceIntegration.Scripting.plugin.dll)

Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptUserFunction
```

The **IScriptUserFunction** type exposes the following members.

Properties

	Name	Description
	IScriptUserFunction.description Property	Retrieves the user function description.
	IScriptUserFunction.id Property	Retrieves the user function id.
	IScriptUserFunction.is_active Property	Retrieves a value indicating whether user function is active.
	IScriptUserFunction.name Property	Retrieves the user function name (displayable name).

Methods

	Name	Description
	IScriptUserFunction.activate Method	Activates the user function.
	IScriptUserFunction.deactivate Method	Deactivates the user function.

See Also

Communication.ip_address Property

Note: This API is now obsolete.

Retrieves or sets the IP-Address.

Namespace: [SchneiderElectric.Scripting.Types.Communication](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
[ObsoleteAttribute("This property is obsolete. Please use  
'get_communication_address' on the device object instead")]  
public string ip_address { get; set; }
```

Property Value

Type: [String](#)

The IP-Address.

Remarks

This property is obsolete. Use 'get_communication_address' on the device object instead.

See Also

Communication.Communication Methods

The [Communication](#) type exposes the following members.

Methods

	Name	Description
	add_gateway	Adds a gateway to the project.

See Also

[Communication Class](#)

[SchneiderElectric.Scripting.Types.Communication Namespace](#)

Communication.add_gateway Method

Adds a gateway to the project.

Namespace: [SchneiderElectric.Scripting.Types.Communication](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void add_gateway(
    string gatewayName,
    string gatewayAddress,
    ushort gatewayPort
)
```

Parameters

gatewayName

Type: [System.String](#)

The intended name of the gateway.

gatewayAddress

Type: [System.String](#)

The intended address of the gateway.

gatewayPort

Type: [System.UInt16](#)

The intended port of the gateway.

Examples

This example shows how to add a gateway to the project.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

# The path to our project
project_path = r"D:\PythonProjects\Example.project"

# Clean up any open project:
if projects.primary:
    projects.primary.close()

# Load the project
proj = projects.open(project_path);

# Set the project as primary project
proj = projects.primary

# Add the gateway
communication_settings.add_gateway("GatewayName", "127.0.0.1", 1217)

# Save project
projects.primary.save()
```

Chapter 14

SchneiderElectric.Scripting.Types.Compiler Namespace

This namespace provides types that allow access to the compiler settings.

Classes

	Class	Description
	CompilerSettings Class	Class provides the functionality to show and change the current compiler version. Click on the members to show some examples.

CompilerSettings Class

Class provides the functionality to show and change the current compiler version.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.Compiler.CompilerSettings

Namespace: [Chapter 14 SchneiderElectric.Scripting.Types.Compiler Namespace](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class CompilerSettings
```

The **CompilerSettings** type exposes the following members.

Properties

Name	Description
CompilerSettings.active_compiler_version Property	Retrieves or sets the active compiler version.
CompilerSettings.active_compiler_version_as_text Property	Retrieves or sets the active compiler version (as text).

Methods

Name	Description
------	-------------

	CompilerSettings.get_all_compiler_version_not_filtered Method	Retrieves all compiler version not filtered by OEM.
	CompilerSettings.get_all_compiler_versions Method	Retrieves all compiler versions.
	CompilerSettings.get_all_compiler_versions_as_text Method	Retrieves all compiler versions.
	CompilerSettings.map_from_internal_to_oem_version Method	Maps from internal to OEM version.
	CompilerSettings.map_from_internal_to_oem_version_as_text Method	Maps from internal to OEM version.
	CompilerSettings.map_from_oem_text_to_internal_version Method	Maps from OEM to internal version.
	CompilerSettings.map_from_oem_to_internal_version Method	Maps from OEM to internal version.

CompilerSettings.CompilerSettings Properties

The [CompilerSettings](#) type exposes the following members.

Properties

	Name	Description
	active_compiler_version	Retrieves or sets the active compiler version.
	active_compiler_version_as_text	Retrieves or sets the active compiler version (as text).

See Also

[CompilerSettings Class](#)

[SchneiderElectric.Scripting.Types.Compiler Namespace](#)

CompilerSettings.active_compiler_version Property

Retrieves or sets the active compiler version.

Namespace: [SchneiderElectric.Scripting.Types.Compiler](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string active_compiler_version { get; set; }
```

Property Value

Type: [String](#)

The active compiler version.

Remarks

This property returns / requires the version format mapped by OEM. Use MapFromInternalToOEMVersion() and MapFromOEMToInternalVersion() to convert between CoDeSys and OEM version.

Examples

This example shows how to use the active_compiler_version property to set or get the current compiler version.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

# Load the project
proj = projects.primary

# Set the project as primary project
proj = projects.primary
```

```
print("All compiler versions")

# Retrieve all compiler versions (filtered)
compiler_versions = compiler_settings.get_all_compiler_versions()

# Print all compiler versions (filtered)
for version in compiler_versions:
    print (" - OEM mapped version: " + version)

# Get active compiler version
compiler_version = compiler_settings.active_compiler_version

print("Current compiler version: " + compiler_version)

# Set new compiler version
compiler_settings.active_compiler_version = "1.36.35.0"

print("New compiler version: " +
compiler_settings.active_compiler_version)

# Save project
projects.primary.save()
```

See Also

[*CompilerSettings Class*](#)

[*SchneiderElectric.Scripting.Types.Compiler Namespace*](#)

CompilerSettings.active_compiler_version_as_text Property

Retrieves or sets the active compiler version (as text).

Namespace: [SchneiderElectric.Scripting.Types.Compiler](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string active_compiler_version_as_text { get; set; }
```

Property Value

Type: [String](#)

The active compiler version.

Remarks

This property returns / requires the version format mapped by OEM. Use MapFromInternalToOEMVersion() and MapFromOEMToInternalVersion() to convert between CoDeSys and OEM version.

Examples

This example shows how to use the active_compiler_version property to set or get the current compiler version.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

# Load the project
proj = projects.primary

# Set the project as primary project
proj = projects.primary
```

```
print("All compiler versions")

# Retrieve all compiler versions (filtered)
compiler_versions = compiler_settings.get_all_compiler_versions()

# Print all compiler versions (filtered)
for version in compiler_versions:
    print (" - OEM mapped version: " + version)

# Get active compiler version
compiler_version = compiler_settings.active_compiler_version

print("Current compiler version: " + compiler_version)

# Set new compiler version
compiler_settings.active_compiler_version = "1.36.35.0"

print("New compiler version: " +
compiler_settings.active_compiler_version)

# Save project
projects.primary.save()
```

CompilerSettings.get_all_compiler_version_not_filtered Method

Retrieves all compiler version not filtered by OEM.

Namespace: [SchneiderElectric.Scripting.Types.Compiler](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string[] get_all_compiler_version_not_filtered()
```

Return Value

Type: [String\[\]](#)

Returns a full list with all compiler versions.

Remarks

The versions are based on the original CoDeSys compiler version

Examples

This example shows how to retrieve a list of all compiler versions.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

proj = projects.primary

print("All compiler versions (not filtered)")

# Retrieve all compiler versions (not filtered)
compiler_versions =
compiler_settings.get_all_compiler_version_not_filtered()

# Print all compiler versions (not filtered)
```

```

Syntax

C#

```
public string[] get_all_compiler_versions()
```

Return Value

Type: [String\[\]](#)

Returns a filtered list with all compiler versions.

Remarks

The versions are based on the mapped OEM compiler version

Examples

This example shows how to retrieve a list of OEM filtered compiler versions.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

proj = projects.primary

print("All compiler versions")

# Retrieve all compiler versions (filtered)
compiler_versions = compiler_settings.get_all_compiler_versions()

Chapter 15

SchneiderElectric.Scripting.Types.EtestTestProvider Namespace

This namespace contains types that support accessing and using ETEST functionality from within the Python API.

Classes

	Class	Description
	ScriptLegacyTestResult Class	Part of the "legacy" scripting API - remains for compatibility.
	TestProvider Class	Class that provides the functionality to run ETESTs and to verify the results. Click on the members to show some examples.

Interfaces

	Interface	Description
	ILegacyScriptTestResult Interface	Legacy interface to access the test results.
	IScriptTestCaseObject Interface	Functionality for manipulating test case objects.
	IScriptTestCaseObject2 Interface	Functionality for manipulating test case objects and run them completely or just specific test sets / test runs.
	IScriptTestCaseObjectMarker Interface	Every IScriptObject instance will be extended with this method.
	IScriptTestElement Interface	Legacy interface to access a test element.
	IScriptTestObjectContainer Interface	This allows objects to create test objects, e.g., TestCases. The methods will be available in the project root as well as applications, and folders below them.
	IScriptTestObjectContainer2 Interface	This allows objects to create test objects, e.g. TestCases. The methods will be available in the

		project root as well as applications, and folders below them.
»	IScriptTestResourceObject Interface	Functionality for manipulating test resource objects.
»	IScriptTestResourceObjectMarker Interface	Every IScriptObject instance will be extended with this method.
»	IScriptTestResult Interface	Functionality to access a test result.
»	IScriptTestRun Interface	Functionality for manipulating a test run.
»	IScriptTestRun2 Interface	Functionality for manipulating a test run. Extension interface for IScriptTestRun .
»	IScriptTestSeriesObject Interface	Functionality for manipulating test series objects.
»	IScriptTestSeriesObjectMarker Interface	Every IScriptObject instance will be extended with this method.
»	IScriptTestSetObject Interface	Functionality for manipulating test set objects.
»	IScriptTestSetObjectMarker Interface	Every IScriptObject instance will be extended with this method.
»	IScriptVarDeclaration Interface	Functionality for manipulating test case objects.

Enumerations

	Enumeration	Description
	TestExecutionState Enumeration	Describes the state of the test execution.
	TestResult Enumeration	Describes the result of a test execution.

ScriptLegacyTestResult Class

Part of the "legacy" scripting API - remains for compatibility.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.EtestTestProvider.ScriptLegacyTestResult

Namespace: [Chapter 15 SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class ScriptLegacyTestResult : ILegacyScriptTestResult
```

The **ScriptLegacyTestResult** type exposes the following members.

Properties

	Name	Description
	ScriptLegacyTestResult.is_successful Property	Returns true if the overall result of this ITestResult is successful. Returns false in all other cases (unknown, unsuccessful, cancelled, etc.).

Methods

	Name	Description
	ScriptLegacyTestResult.get_global_result_string Method	Retrieves the test result as string.

 <u>ScriptLegacyTestResult.write_xml Method</u>	Writes the TestResult into an XML Document.
--	---

ScriptLegacyTestResult.ScriptLegacyTestResult Methods

The [ScriptLegacyTestResult](#) type exposes the following members.

Methods

	Name	Description
	get_global_result_string	Retrieves the test result as string.
	write_xml	Writes the TestResult into an XML Document

See Also

[ScriptLegacyTestResult Class](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

ScriptLegacyTestResult.get_global_result_string Method

Retrieves the test result as string.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string get_global_result_string()
```

Return Value

Type: [String](#)

The test result

Implements

[ILegacyScriptTestResult.get_global_result_string\(\)](#)

See Also

[ScriptLegacyTestResult Class](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

ScriptLegacyTestResult.write_xml Method

Writes the TestResult into an XML Document

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void write_xml (
    Stream outStream
)
```

Parameters

outStream

Type: [System.IO.Stream](#)

The stream the XML Document will be written to.

Implements

[ILegacyScriptTestResult.write_xml\(Stream\)](#)

See Also

[ScriptLegacyTestResult Class](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

TestProvider Class

Class that provides the functionality to run ETESTs and to verify the results.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.EtestTestProvider.TestProvider

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class TestProvider
```

The **TestProvider** type exposes the following members.

Properties

	Name	Description
	TestProvider.is_test_running Property	Indicates if the test is running.

Methods

	Name	Description
	TestProvider.get_all_testcases Method	Retrieves all testcases from a testseries.
	TestProvider.get_all_testelements Method	Returns all testElements from a testseries.

	<u>TestProvider.get_all_testseries Method</u>	Returns all test series from the project.
	<u>TestProvider.run_test Method</u>	This function runs an ETEST.

See Also

TestProvider.TestProvider Properties

The [TestProvider](#) type exposes the following members.

Properties

	Name	Description
	is_test_running	Indicates if the test is running.

See Also

[TestProvider Class](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

TestProvider.is_test_running Property

Indicates if the test is running.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public static bool is_test_running { get; }
```

Property Value

Type: [Boolean](#)

Examples

This example shows how to run a test.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

# The path to our project
project_path = r"D:\PythonProjects\Example.project"

# Clean up any open project:
if projects.primary:
    projects.primary.close()

# Load the project
proj = projects.open(project_path)

# Set the project as primary project
proj = projects.primary
```

```
# We fetch the active application.
app = proj.active_application

# And create the online application for it.
onlineapp = online.create_online_application(app)

# We login into the device.
onlineapp.login(OnlineChangeOption.Try, True)

# We start the application, if necessary.
if not onlineapp.application_state == ApplicationState.run:
    onlineapp.start()

# We let the app do its work for some time...
system.delay(1000)

# This functions runs the specified test/testseries
def func_run_test(test_name):
    print(test_name)
    etest_test_provider.run_test(test_name)
    while etest_test_provider.is_test_running:
        system.delay(1000)
    return

# Retrieve all testseries from the project
test_series = etest_test_provider.get_all_testseries()

# Run all testseries
for test_object in test_series:
    func_run_test(test_object)

# Retrieve all testelements from testseries "TS_Crank"
test_elements = etest_test_provider.get_all_testelements("TS_Crank")

# Print all testelements
for test_element in test_elements:
    print ("Found TestElement TS_Crank: " + test_element)

    # Run only "TS_Crank" test object

[TestProvider Class](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

TestProvider.get_all_testcases Method

Retrieves all testcases from a testseries.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public IList<string> get_all_testcases(
    IExtendedObject<IScriptObject> application = null
)
```

Parameters

application (Optional)

Type: IExtendedObject(IScriptObject)

The application.

Return Value

Type: [IList\(String\)](#)

Returns a list of strings that contain the names of all testcases in the testseries.

Exceptions

Exception	Condition
ApplicationException	Raised if no project is opened.

Examples

This example shows how to retrieve all testelements from a testseries.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

# The path to our project
project_path = r"D:\PythonProjects\Example.project"

# Clean up any open project:
if projects.primary:
    projects.primary.close()

# Load the project
proj = projects.open(project_path);

# Set the project as primary project
proj = projects.primary

# Retrieve all testelements from testseries "TS_Crank"
test_cases = etest_test_provider.get_all_testcases()

# Print all testelements
for tc in test_cases:
    print ("Found TestCase: " + tc)
```

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public IEnumerable<IScriptTestElement> get_all_testelements(
    string testseries,
    IExtendedObject<IScriptObject> application = null
)
```

Parameters

testseries

Type: [System.String](#)

Name of the testseries.

application (Optional)

Type: IExtendedObject(IScriptObject)

The application.

Return Value

Type: [IEnumerable\(IScriptTestElement\)](#)

Returns a list of [testElements](#)

Exceptions

Exception	Condition
-----------	-----------

ApplicationException	Raised if no project is opened.

    string testName,
    string fullFilePath = null,
    IExtendedObject<IScriptObject> application = null
)
```

Parameters

testName

Type: [System.String](#)

Name of the Test that should be run.

fullFilePath (Optional)

Type: [System.String](#)

[Optional] Path where the result file is stored.

application (Optional)

Type: IExtendedObject(IScriptObject)

The application to run the test on.

Return Value

Type: [ILegacyScriptTestResult](#)

Returns the TestResult object of the finished test.

Exceptions

Exception	Condition
ApplicationException

Legacy interface to access the test results

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface ILegacyScriptTestResult
```

The **ILegacyScriptTestResult** type exposes the following members.

Properties

	Name	Description
	ILegacyScriptTestResult.is_successful Property	Returns true if the overall result of this ITestResult is successful. Returns false in all other cases (unknown, unsuccessful, cancelled, etc.).

Methods

	Name	Description
	ILegacyScriptTestResult.get_global_result_string Method	Retrieves the test result as string.
	ILegacyScriptTestResult.write_xml Method	Writes the TestResult into an XML Document

Remarks

This interface is exported to Python, and thus adheres to Python naming

standards.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestCaseObject : IScriptTestCaseObjectMarker
```

The **IScriptTestCaseObject** type exposes the following members.

Properties

	Name	Description
	IScriptTestCaseObject.description Property	The Description Text of this test case.
	IScriptTestCaseObject.is_parameterized_test_case_feature_activated Property	Retrieves or sets a value indicating the "parameterized test case feature" is activated.
	IScriptTestCaseObject.resource_references Property	Retrieves a sequence of all referenced IScriptTestResourceObject names.
	IScriptTestCaseObject.test_data_type_name Property	Retrieves or sets the data type (DUT) used for the definition of test runs.

	IScriptTestCaseObject.test_data_variable_name Property	Retrieves or sets the name of the test data variable.
	IScriptTestCaseObject.test_set_references Property	Retrieves a sequence of all referenced IScriptTestSetObject names.

Methods

Name	Description
IScriptTestCaseObject.run Method	Starts executing the TestCase on the active application. This method instantly returns; execution runs asynchronously.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

IScriptTestCaseObject.run Method

Starts executing the TestCase on the active application. This method instantly returns; execution runs asynchronously.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptTestResult run(  
    IExtendedObject<IScriptObject> application = null  
)
```

Parameters

application (Optional)

Type: IExtendedObject(IManagedObject)

The application object to use. If this parameter is omitted, the active application is used. (This parameter is optional.)

Return Value

Type: [IScriptTestResult](#)

The result of the test run.

Exceptions

Exception	Condition
TestStartImpossibleException	An exception is raised when test execution could not be started. This can have several reasons (not logged in, object to test can't be executed, no task referencing the test suite, etc.)

Remarks

When a **TestStartImpossibleException** is raised, no test result has been created.

IScriptTestCaseObject2.run_partly Method

(IExtendedObject`1(IScriptObject), UInt32, IExtendedObject`1(IScriptObject))

Starts executing the TestCase on the active application. This method instantly returns; execution runs asynchronously.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptTestResult run_partly(  
    IExtendedObject<IScriptObject> test_set,  
    uint run_id = 0,  
    IExtendedObject<IScriptObject> application = null  
)
```

Parameters

test_set

Type: IExtendedObject(IScriptObject)

The test set to execute.

run_id (Optional)

Type: [System.UInt32](#)

Index of the run in the context of the specified test set. If this parameter is omitted or 0 is passed, all runs of the specified test set are executed. (This parameter is optional.)

application (Optional)

Type: IExtendedObject(IScriptObject)

The application object to use. If this parameter is omitted, the active

application is used. (This parameter is optional.)

Return Value

Type: [IScriptTestResult](#)

The result of the test run.

Exceptions

Exception	Condition
TestStartImpossibleException	An exception is raised when test execution could not be started. This can have several reasons (not logged in, object to test can't be executed, no task referencing the test suite, etc.)

Remarks

IScriptTestCaseObjectMarker Interface

Every **IScriptObject** instance will be extended with this method.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestCaseObjectMarker
```

The **IScriptTestCaseObjectMarker** type exposes the following members.

Properties

	Name	Description
	IScriptTestCaseObjectMarker.is_test_case_Property	Retrieves a value indicating whether this instance is a test case object.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestCaseObjectMarker.IScriptTestCaseObjectMarker Properties

The [IScriptTestCaseObjectMarker](#) type exposes the following members.

Properties

	Name	Description
	is_test_case	Retrieves a value indicating whether this instance is a test case object.

See Also

[IScriptTestCaseObjectMarker Interface](#)

IScriptTestElement Interface

Legacy interface to access a test element.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestElement
```

The **IScriptTestElement** type exposes the following members.

Properties

	Name	Description
	IScriptTestElement.is_test_case Property	Retrieves whether the element is a test case.
	IScriptTestElement.is_test_series Property	Retrieves whether the element is a test series.
	IScriptTestElement.name Property	Retrieves the name of the test element.
	IScriptTestElement.object_guid Property	Retrieves the object guid of the test element. For CoDeSys based implementations, this is the object Guid that is used to identify the object in the object manager. For all implementations this Guid is a unique identifier: if two ITestElement instances have the same ObjectGuid they represent the same entity.

Methods

	Name	Description
--	------	-------------

 <u>IScriptTestElement.get_selected_elements</u> Method	Retrieves the elements selected by this element.
--	--

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

IScriptTestElement.name Property

Retrieves the name of the test element.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string name { get; }
```

Property Value

Type: [String](#)

See Also

[*IScriptTestElement Interface*](#)

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

IScriptTestElement.object_guid Property

Retrieves the object guid of the test element.

For CoDeSys based implementations, this is the object Guid that is used to identify the object in the object manager.

For all implementations this Guid is a unique identifier: if two ITestElement instances have the same ObjectGuid they represent the same entity.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
Guid object_guid { get; }
```

Property Value

Type: [Guid](#)

See Also

[IScriptTestElement Interface](#)

IScriptTestElement.IScriptTestElement Methods

The [IScriptTestElement](#) type exposes the following members.

Methods

	Name	Description
	get_selected_elements	Retrieves the elements selected by this element.

See Also

[IScriptTestElement Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestElement.get_selected_elements Method

Retrieves the elements selected by this element.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: SchneiderElectric.Programming.Etest.Scripting.plugin (in SchneiderElectric.Programming.Etest.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IEnumerable<IScriptTestElement> get_selected_elements()
```

Return Value

Type: [IEnumerable\(IIScriptTestElement\)](#)

all other elements that are selected by this element.

Remarks

This method only returns meaningful data if **is_test_series** is true.

IScriptTestObjectContainer Interface

This allows objects to create test objects, e.g., TestCases. The methods will be available in the project root as well as applications, and folders below them.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestObjectContainer
```

The **IScriptTestObjectContainer** type exposes the following members.

Methods

	Name	Description
≡	IScriptTestObjectContainer.create_test_case Method	Creates a Test Case with the specified name.
≡	IScriptTestObjectContainer.create_test_resource Method	Creates a Test Resource with the specified name.
≡	IScriptTestObjectContainer.create_test_series Method	Creates a Test Series with the specified name.
≡	IScriptTestObjectContainer.create_test_set Method	Creates a Test Set with the specified name.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

IScriptTestObjectContainer.IScriptTestObjectContainer Methods

The [IScriptTestObjectContainer](#) type exposes the following members.

Methods

Name	Description
 create_test_case	Creates a TestCase with the specified name.
 create_test_resource	Creates a TestResource with the specified name.
 create_test_series	Creates a TestSeries with the specified name.
 create_test_set	Creates a TestSet with the specified name.

See Also

[IScriptTestObjectContainer Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestObjectContainer.create_test_case Method

Creates a TestCase with the specified name.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_test_case(  
    string name  
)
```

Parameters

name

Type: [System.String](#)

The name.

Return Value

Type: [IExtendedObject\(IScriptObject\)](#)

The **IScriptObject** of the newly created TestCase.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

See Also

[*IScriptTestObjectContainer Interface*](#)

IScriptTestObjectContainer.create_test_resource Method

Creates a TestResource with the specified name.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_test_resource(  
    string name  
)
```

Parameters

name

Type: [System.String](#)

The name.

Return Value

Type: [IExtendedObject\(IScriptObject\)](#)

The **IScriptObject** of the newly created TestResource.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

Creates a TestSeries with the specified name.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_test_series(  
    string name  
)
```

Parameters

name

Type: [System.String](#)

The name.

Return Value

Type: [IExtendedObject\(IScriptObject\)](#)

The **IScriptObject** of the newly created TestSeries.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

Creates a TestSet with the specified name.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_test_set(
    string name
)
```

Parameters

name

Type: [System.String](#)

The name.

Return Value

Type: [IExtendedObject\(IScriptObject\)](#)

The **IScriptObject** of the newly created TestSet.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

IScriptTestObjectContainer2 Interface

This allows objects to create test objects, e.g., TestCases. The methods will be available in the project root as well as applications, and folders below them.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestObjectContainer2 :  
IScriptTestObjectContainer
```

The **IScriptTestObjectContainer2** type exposes the following members.

Methods

	Name	Description
 IScriptTestObjectContainer2.create_test_case Method		Creates a Test Case with the specified name.
 IScriptTestObjectContainer2.create_test_resource Method		Creates a Test Resource with the specified name.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

IScriptTestObjectContainer2.IScriptTestObjectContainer2 Methods

The [IScriptTestObjectContainer2](#) type exposes the following members.

Methods

	Name	Description
	create_test_case	Creates a TestCase with the specified name.
	create_test_resource	Creates a TestResource with the specified name.

See Also

[IScriptTestObjectContainer2 Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestObjectContainer2.create_test_case Method

Creates a TestCase with the specified name.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_test_case(  
    string name,  
    bool create_prepare,  
    bool create_execute,  
    bool create_finalize,  
    bool create_cleanup  
)
```

Parameters

name

Type: [System.String](#)

The name.

create_prepare

Type: [System.Boolean](#)

Defines if the test-method "Prepare" is created.

create_execute

Type: [System.Boolean](#)

Defines if the test-method "Execute" is created.

create_finalize

Type: [System.Boolean](#)

Defines if the test-method "Finalize" is created.

create_cleanup

Type: [System.Boolean](#)

Defines if the test-method "Cleanup" is created.

Return Value

Type: IExtendedObject(IManagedObject)

The **IManagedObject** of the newly created TestCase.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

IScriptTestObjectContainer2.create_test_resource Method

Creates a TestResource with the specified name.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IExtendedObject<IScriptObject> create_test_resource(
    string name,
    bool create_prepare,
    bool create_cleanup
)
```

Parameters

name

Type: [System.String](#)

The name.

create_prepare

Type: [System.Boolean](#)

Defines if the test-method "Prepare" is created.

create_cleanup

Type: [System.Boolean](#)

Defines if the test-method "Cleanup" is created.

Return Value

Type: **IExtendedObject(IScriptObject)**

The **IScriptObject** of the newly created TestResource.

Exceptions

Exception	Condition
Exception	Any exception which occurs if the name is not an IEC identifier, or an object with the same name already exists within the same namespace, or the object cannot be created under the parent.

IScriptTestResourceObject Interface

Functionality for manipulating test resource objects.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestResourceObject :  
IScriptTestResourceObjectMarker
```

The **IScriptTestResourceObject** type exposes the following members.

Properties

	Name	Description
	IScriptTestResourceObject.description Property	The Description Text of this test case.
	IScriptTestResourceObject.resource_references Property	Retrieves a sequence of all referenced IScriptTestResourceObject names.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestResourceObjectMarker Interface

Every **IScriptObject** instance will be extended with this method.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestResourceObjectMarker
```

The **IScriptTestResourceObjectMarker** type exposes the following members.

Properties

	Name	Description
	IScriptTestSeriesObjectMarker.is_test_series Property	Retrieves a value indicating whether this instance is a test resource object.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestResourceObjectMarker.IScriptTestResourceObjectMarker Properties

The [IScriptTestResourceObjectMarker](#) type exposes the following members.

Properties

	Name	Description
	is_test_resource	Retrieves a value indicating whether this instance is a test resource object.

See Also

[IScriptTestResourceObjectMarker Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestResourceObjectMarker.is_test_resource Property

Retrieves a value indicating whether this instance is a test resource object.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool is_test_resource { get; }
```

Property Value

Type: [Boolean](#)

`true` if this instance is test resource object; otherwise, `false`.

See Also

[IScriptTestResourceObjectMarker Interface](#)

IScriptTestResult Interface

Functionality to access a test result.

Namespace: SchneiderElectric.Scripting.Types.EtestTestProvider

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestResult
```

The **IScriptTestResult** type exposes the following members.

Properties

	Name	Description
	IScriptTestResult.element_under_test Property	Retrieves the tested element (TestCase or TestSeries).
	IScriptTestResult.end_time Property	Retrieves the end time of the test run or <code>null</code> , if the test run is not yet finished.
	IScriptTestResult.execution_state Property	Retrieves the execution state (running or finished). Until test execution is finished, no meaningful result will be available.
	IScriptTestResult.operator_comment Property	Operator Comment (entered by user).
	IScriptTestResult.operator_name Property	Operator Name (entered by user).
	IScriptTestResult.result Property	Retrieves the result of the executed test. While the test is running, the result will be unknown . Poll execution_state to wait for test completion.
	IScriptTestResult.start_time Property	Retrieves the start time of the test run.

 IScriptTestResult.task_cycle_time Property	Cycle Time of the Task that executed the Test.
--	--

Methods

	Name	Description
	IScriptTestResult.save_as_html Method	Saves the result as an HTML file to the specified path.
	IScriptTestResult.save_as_xml Method	Saves the result as a XML file to the specified path.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

IScriptTestResult.IScriptTestResult Methods

The [IScriptTestResult](#) type exposes the following members.

Methods

	Name	Description
	save_as_html	Saves the result as an HTML file to the specified path.
	save_as_xml	Saves the result as a XML file to the specified path.

See Also

[IScriptTestResult Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestResult.save_as_html Method

Saves the result as an HTML file to the specified path.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string save_as_html (
    string path = null,
    string xssltPath = null
)
```

Parameters

path (Optional)

Type: [System.String](#)

The path of the export file. If omitted, it is exported into a string and returns that string. (This parameter is optional.)

xssltPath (Optional)

Type: [System.String](#)

The path of the XSL transformation file to use. If omitted, we use the standard ETEST template for transformation. (This parameter is optional.)

Return Value

Type: [String](#)

The exported HTML as string, or null if a file path is given.

See Also

[*IScriptTestResult Interface*](#)

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

IScriptTestResult.save_as_xml Method

Saves the result as a XML file to the specified path.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string save_as_xml(  
    string path  
)
```

Parameters

path

Type: [System.String](#)

The path of the file we export into. If omitted, we export into a string and return that string. (This parameter is optional.)

Return Value

Type: [String](#)

The exported XML as string, or null if a filepath is given.

Functionality for manipulating test series objects.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestSeriesObject :  
IScriptTestSeriesObjectMarker
```

The **IScriptTestSeriesObject** type exposes the following members.

Properties

	Name	Description
	IScriptTestSeriesObject.referenced_tests Property	Retrieves referenced tests (test cases and test series)

Methods

	Name	Description
	IScriptTestSeriesObject.run Method	Starts executing the TestSeries on the active application. This method instantly returns; execution runs asynchronously.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

IScriptTestSeriesObject.IScriptTestSeriesObject Properties

The [IScriptTestSeriesObject](#) type exposes the following members.

Properties

Name	Description
 referenced_tests	Retrieves referenced tests (test cases and test series).

See Also

[*IScriptTestSeriesObject Interface*](#)

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

[IScriptTestSeriesObject.referenced_tests Property](#)

Retrieves referenced tests (test cases and test series)

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptList2<string> referenced_tests { get; }
```

Property Value

Type: [IScriptList2\(String\)](#)

See Also

[IScriptTestSeriesObject Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestSeriesObject.IScriptTestSeriesObject Methods

The [IScriptTestSeriesObject](#) type exposes the following members.

Methods

	Name	Description
	run	Starts executing the TestSeries on the active application. This method instantly returns; execution runs asynchronously.

See Also

[*IScriptTestSeriesObject Interface*](#)

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

IScriptTestSeriesObject.run Method

Starts executing the TestSeries on the active application. This method instantly returns; execution runs asynchronously.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptTestResult run(
    IExtendedObject<IScriptObject> application = null
)
```

Parameters

application (Optional)

Type: IExtendedObject(IScriptObject)

The application object to use. If this parameter is omitted, the active application is used. (This parameter is optional.)

Return Value

Type: [IScriptTestResult](#)

The result of the test run.

Exceptions

Exception	Condition
TestStartImpossibleException	An exception is raised when test execution could not be started. This can have several reasons (not logged in, object to test can't be executed, no task referencing the test suite, etc.)

Remarks

When a **TestStartImpossibleException** is raised, no test result has been created.

See Also

[*IScriptTestSeriesObject Interface*](#)

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

IScriptTestSeriesObjectMarker Interface

Every **IScriptObject** instance will be extended with this method.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestSeriesObjectMarker
```

The **IScriptTestSeriesObjectMarker** type exposes the following members.

Properties

	Name	Description
	IScriptTestSeriesObjectMarker.is_test_series Property	Retrieves a value indicating whether this instance is a test series object.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestSeriesObjectMarker.IScriptTestSeriesObjectMarker Properties

The [IScriptTestSeriesObjectMarker](#) type exposes the following members.

Properties

	Name	Description
	is_test_series	Retrieves a value indicating whether this instance is a test series object.

See Also

[IScriptTestSeriesObjectMarker Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestSeriesObjectMarker.is_test_series Property

Retrieves a value indicating whether this instance is a test series object.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool is_test_series { get; }
```

Property Value

Type: [Boolean](#)

`true` if this instance is test series object; otherwise, `false`.

See Also

[IScriptTestSeriesObjectMarker Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestSetObject Interface

Functionality for manipulating test set objects.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestSetObject : IScriptTestSetObjectMarker
```

The **IScriptTestSetObject** type exposes the following members.

Properties

	Name	Description
	IScriptTestSetObject.test_data_type_name Property	Retrieves or sets the data type (DUT) used the definition of test runs.
	IScriptTestSetObject.test_runs Property	Retrieves a sequence of all test runs defined in this IScriptTestSetObject .

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestSetObject.IScriptTestSetObject Properties

The [IScriptTestSetObject](#) type exposes the following members.

Properties

Name	Description
 test_data_type_name	Retrieves or sets the data type (DUT) used the definition of test runs.
 test_runs	Retrieves a sequence of all test runs defined in this IScriptTestSetObject .

See Also

[IScriptTestSetObject Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestSetObject.test_data_type_name Property

Retrieves or sets the data type (DUT) used the definition of test runs.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string test_data_type_name { get; set; }
```

Property Value

Type: [String](#)

The test data type.

See Also

[IScriptTestSetObject Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestSetObject.test_runs Property

Retrieves a sequence of all test runs defined in this [IScriptTestSetObject](#).

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptList2<IScriptTestRun> test_runs { get; }
```

Property Value

Type: [IScriptList2\(IScriptTestRun\)](#)

Remarks

Internally, the test run is referenced by its index. Therefore, the returned reference is only valid as long as the index of the test run has not changed.

See Also

[IScriptTestSetObject Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestSetObjectMarker Interface

Every **IScriptObject** instance will be extended with this method.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptTestSetObjectMarker
```

The **IScriptTestSetObjectMarker** type exposes the following members.

Properties

	Name	Description
	IScriptTestSetObjectMarker.is_test_set_Property	Retrieves a value indicating whether this instance is a test set object.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptTestSetObjectMarker.IScriptTestSetObjectMarker Properties

The [IScriptTestSetObjectMarker](#) type exposes the following members.

Properties

	Name	Description
	is_test_set	Retrieves a value indicating whether this instance is a test set object.

See Also

[*IScriptTestSetObjectMarker Interface*](#)

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

IScriptTestSetObjectMarker.is_test_set Property

Retrieves a value indicating whether this instance is a test set object.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool is_test_set { get; }
```

Property Value

Type: [Boolean](#)

`true` if this instance is test set object; otherwise, `false`.

See Also

[IScriptTestSetObjectMarker Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptVarDeclaration Interface

Functionality for manipulating test case objects.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptVarDeclaration
```

The **IScriptVarDeclaration** type exposes the following members.

Properties

	Name	Description
	IScriptVarDeclaration.name Property	Retrieves or sets the name of the variable.
	IScriptVarDeclaration.type Property	Retrieves or sets the type of the variable, e.g., INT or REAL.

Remarks

An implementation class of this interface is injected under the name "VarDeclaration" into the Python scope so Python code can create a variable declaration without the need to sub-class that interface. The constructor signature is: VarDeclaration(string name, string type). This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

IScriptVarDeclaration.IScriptVarDeclaration Properties

The [IScriptVarDeclaration](#) type exposes the following members.

Properties

	Name	Description
	name	Retrieves or sets the name of the variable.
	type	Retrieves or sets the type of the variable, e.g., INT or REAL.

See Also

[*IScriptVarDeclaration Interface*](#)

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

IScriptVarDeclaration.name Property

Retrieves or sets the name of the variable.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string name { get; }
```

Property Value

Type: [String](#)

The name of the variable.

See Also

[*IScriptVarDeclaration Interface*](#)

[*SchneiderElectric.Scripting.Types.EtestTestProvider Namespace*](#)

IScriptVarDeclaration.type Property

Retrieves or sets the type of the variable, e.g., INT or REAL.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string type { get; }
```

Property Value

Type: [String](#)

The type of the variable.

See Also

[IScriptVarDeclaration Interface](#)

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

TestExecutionState Enumeration

Describes the state of the test execution.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public enum TestExecutionState
```

Members

Member name	Value	Description
running	0	The test is running.
finished	1	The test has finished.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

See Also

[SchneiderElectric.Scripting.Types.EtestTestProvider Namespace](#)

TestResult Enumeration

Describes the result of a test execution.

Namespace: [SchneiderElectric.Scripting.Types.EtestTestProvider](#)

Assembly: Elau.Epas5.PacUnitTest (in Elau.Epas5.PacUnitTest.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public enum TestResult
```

Members

Member name	Value	Description
unknown	0	The result is unknown (test still running).
successful	1	The test has completed successfully.
failed	2	The test has completed unsuccessfully.

Remarks

This interface is exported to Python, and thus adheres to Python naming standards.

Chapter 16

SchneiderElectric.Scripting.Types.JobList Namespace

This namespace provides types and methods that allow access to the job lists.

Interfaces

	Interface	Description
»	IScriptHistoryEntry Interface	History information entry of a job.
»	IScriptJob Interface	Represents a job instance item.
»	IScriptJobActivities Interface	API to access job activity information.
»	IScriptJobActivity Interface	Represents a job activity item in a job.
»	IScriptJobComment Interface	Represents a comment entry in a job.
»	IScriptJobComments Interface	Provides access to job comments.
»	IScriptJobList Interface	Provides access to jobs.
»	IScriptJobTags Interface	Provides access to job tags.

Enumerations

	Enumeration	Description
»	JobModificationActions Enumeration	Type definition for modification actions of jobs.
»	JobStates Enumeration	The states which are assigned to a Job.
»	JobTypes Enumeration	The Types which are assigned to a Job.
»	JobUrgencies Enumeration	Represents the job urgency.

IScriptHistoryEntry Interface

History information entry of a job.

Namespace: [Chapter 16 SchneiderElectric.Scripting.Types.JobList Namespace](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptHistoryEntry
```

The **IScriptHistoryEntry** type exposes the following members.

Properties

	Name	Description
	action	Retrieves the action that reflects the type of modification.
	IScriptHistoryEntry.date Property	Retrieves or sets the date when the history event was created.
	IScriptHistoryEntry.new_state Property	Retrieves the JobState that is valid after the modification.
	IScriptHistoryEntry.old_state Property	Retrieves the JobState that was valid before the modification.
	IScriptHistoryEntry.user Property	The User that caused the entry.

See Also

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptHistoryEntry.IScriptHistoryEntry Properties

The [IScriptHistoryEntry](#) type exposes the following members.

Properties

	Name	Description
	action	Retrieves the action that reflects the type of modification.
	date	Retrieves or sets the date when the history event was created.
	new_state	Retrieves the JobState that is valid after the modification.
	old_state	Retrieves the JobState that was valid before the modification.
	user	The User that caused the entry.

See Also

[IScriptHistoryEntry Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptHistoryEntry.action Property

Retrieves the action that reflects the type of modification.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
JobModificationActions action { get; }
```

Property Value

Type: [JobModificationActions](#)

The action.

See Also

[IScriptHistoryEntry Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptHistoryEntry.date Property

Retrieves or sets the date when the history event was created.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
DateTime date { get; }
```

Property Value

Type: [DateTime](#)

The date.

See Also

[*IScriptHistoryEntry Interface*](#)

[*SchneiderElectric.Scripting.Types.JobList Namespace*](#)

IScriptHistoryEntry.new_state Property

Retrieves the JobState that is valid after the modification.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
JobStates new_state { get; }
```

Property Value

Type: [JobStates](#)

The new state.

See Also

[IScriptHistoryEntry Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptHistoryEntry.old_state Property

Retrieves the JobState that was valid before the modification.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
JobStates old_state { get; }
```

Property Value

Type: [JobStates](#)

The old state.

See Also

[IScriptHistoryEntry Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptHistoryEntry.user Property

The User that caused the entry.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string user { get; }
```

Property Value

Type: [String](#)

See Also

[IScriptHistoryEntry Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJob Interface

Represents a job instance item.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptJob
```

The **IScriptJob** type exposes the following members.

Properties

	Name	Description
	IScriptJob.activities Property	Retrieves the activities that are associated with this Job.
	IScriptJob.assigned_to Property	The person who is assigned to the Job. Default = Win Username
	IScriptJob.closed_date Property	The date when the Job was closed.
	IScriptJob.comments Property	Retrieves the comments that were added by the user.
	IScriptJob.creation_date Property	The date when the Job was created. Default = DateTime.Now.
	IScriptJob.external_id Property	Retrieves or sets the external identifier.
	IScriptJob.guid Property	The Guid from the Job.
	IScriptJob.history Property	History of state changes that were done on the job.
	IScriptJob.is_stored_project_global Property	Declares if the Job could be seen by everyone. Default = true.

	IScriptJob.issuer Property	The person who created the Job. Default = WinUserName.
	IScriptJob.state Property	Shows the current Job state.
	IScriptJob.tags Property	A list of tags that help the user to categorize the job and allow easy search/filter.
	IScriptJob.title Property	The Job title.
	IScriptJob.tool_guid Property	A Guid, which declares to which product the Job is assigned, e.g., Motion or Logic Builder. As default, the ToolGuid from the currently running process, which has created the Job, is taken.
	IScriptJob.type Property	Declares the icon which is shown at the UI.
	IScriptJob.urgency Property	Represents the urgency for the Job. Default = JobUrgency.Normal.

Methods

	Name	Description
	IScriptJob.close Method	Closes the Job.
	IScriptJob.commit Method	Saves the Job data.
	IScriptJob.delete Method	Deletes the Job.
	IScriptJob.reopen Method	Reopens the Job.
	IScriptJob.set_in_progress Method	Set Job to "in progress".

See Also

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJob.IScriptJob Properties

The [IScriptJob](#) type exposes the following members.

Properties

Name	Description
 activities	Retrieves the activities that are associated with this Job.
 assigned_to	The person who is assigned to the Job. Default = Win Username
 closed_date	The date when the Job was closed.
 comments	Retrieves the comments that were added by the user.
 creation_date	The date when the Job was created. Default = DateTime.Now.
 external_id	Retrieves or sets the external identifier.
 guid	The Guid from the Job.
 history	History of state changes that were done on the job.
 is_stored_project_global	Declares if the Job could be seen by everyone. Default = true.
 issuer	The person who created the Job. Default = Win UserName.
 state	Shows the current Job state.
 tags	A list of tags that help the user to categorize the job and allow easy search/filter.
 title	The Job title.
 tool_guid	A Guid, which declares to which product the Job is assigned, e.g., Motion or Logic Builder. As default, the ToolGuid from the currently running process, which has created the Job, is taken.
 type	Declares the icon which is shown at the UI.
 urgency	Represents the urgency for the Job. Default = JobUrgency.Normal.

```
Guid tool_guid { get; set; }
```

Property Value

Type: [Guid](#)

See Also

[*IScriptJob Interface*](#)

[*SchneiderElectric.Scripting.Types.JobList Namespace*](#)

IScriptJob.type Property

Declares the icon which'll be shown at the UI.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
JobTypes type { get; set; }
```

Property Value

Type: [JobTypes](#)

See Also

[*IScriptJob Interface*](#)

[*SchneiderElectric.Scripting.Types.JobList Namespace*](#)

IScriptJob.urgency Property

Represents the urgency for the Job. Default = JobUrgency.Normal.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
JobUrgencies urgency { get; set; }
```

Property Value

Type: [JobUrgencies](#)

See Also

IScriptJob.IScriptJob Methods

The [IScriptJob](#) type exposes the following members.

Methods

	Name	Description
	close	Closes the Job.
	commit	Saves the Job data.
	delete	Deletes the Job.
	reopen	Reopens the Job.
	set_in_progress	Set Job to "in progress".

See Also

[IScriptJob Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJob.close Method

Closes the Job.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void close()
```

See Also

[IScriptJob Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJob.commit Method

Saves the Job data.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void commit()
```

See Also

[IScriptJob Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJob.delete Method

Deletes the Job.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void delete()
```

See Also

[IScriptJob Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJob.reopen Method

Reopens the Job.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void reopen()
```

See Also

[IScriptJob Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJob.set_in_progress Method

Set Job to "in progress".

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void set_in_progress()
```

See Also

[IScriptJob Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobActivities Interface

API to access job activity information.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptJobActivities
```

The **IScriptJobActivities** type exposes the following members.

Properties

	Name	Description
	IScriptJobActivities.all Property	Retrieve all activities.

Methods

	Name	Description
	IScriptJobActivities.by_id Method	Retrieves a job activity object by id.
	IScriptJobActivities.create Method	Creates a new job activity. Activity is attached to the job.
	IScriptJobActivities.has_activity Method	Determines whether a job activity with specified id exists.

See Also

IScriptJobActivities.IScriptJobActivities Properties

The [IScriptJobActivities](#) type exposes the following members.

Properties

	Name	Description
	all	Retrieve all activities.

See Also

[*IScriptJobActivities Interface*](#)

[*SchneiderElectric.Scripting.Types.JobList Namespace*](#)

IScriptJobActivities.all Property

Retrieve all activities.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptJobActivity[] all { get; }
```

Property Value

Type: [I](#)ScriptJobActivity[]

All activities.

See Also

[IScriptJobActivities Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobActivities.IScriptJobActivities Methods

The [IScriptJobActivities](#) type exposes the following members.

Methods

	Name	Description
	by_id	Retrieves a job activity object by id.
	create	Creates a new job activity. Activity is attached to the job.
	has_activity	Determines whether a job activity with specified id exists.

See Also

[IScriptJobActivities Interface](#)

IScriptJobActivities.by_id Method

Retrieves a job activity object by id.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptJobActivity by_id(  
    Guid id  
)
```

Parameters

id

Type: [System.Guid](#)

The identifier.

Return Value

Type: [IScriptJobActivity](#)

The job activity

See Also

[IScriptJobActivities Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobActivities.create Method

Creates a new job activity. Activity is attached to the job.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptJobActivity create(
    string title,
    string instruction = ""
)
```

Parameters

title

Type: [System.String](#)

The title.

instruction (Optional)

Type: [System.String](#)

The instruction.

Return Value

Type: [IScriptJobActivity](#)

The job activity.

See Also

[IScriptJobActivities Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobActivities.has_activity Method

Determines whether a job activity with specified id exists.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool has_activity(  
    Guid id  
)
```

Parameters

id

Type: [System.Guid](#)

The identifier.

Return Value

Type: [Boolean](#)

true or false

See Also

[IScriptJobActivities Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobActivity Interface

Represents a job activity item in a job.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptJobActivity
```

The **IScriptJobActivity** type exposes the following members.

Properties

	Name	Description
	IScriptJobActivity.guid Property	Retrieves the unique identifier.
	IScriptJobActivity.instruction Property	Instructions for executing the Activity is presented on the control that shows or initiates the Activity.
	IScriptJobActivity.parent_job_guid Property	Retrieves the Guid of the parent job.
	IScriptJobActivity.title Property	Retrieves the descriptive title of the Activity to be presented to the user as short text.

Methods

	Name	Description
	IScriptJobActivity.remove Method	Removes this job activity from the job.

See Also

[*SchneiderElectric.Scripting.Types.JobList Namespace*](#)

IScriptJobActivity.IScriptJobActivity Properties

The [IScriptJobActivity](#) type exposes the following members.

Properties

	Name	Description
	guid	Retrieves the unique identifier.
	instruction	Instructions for executing the Activity is presented on the control that shows or initiates the Activity.
	parent_job_guid	Retrieves the Guid of the parent job.
	title	A descriptive title of the Activity that will be presented to the user as short text.

See Also

[*IScriptJobActivity*.guid Property](#)

Retrieves the unique identifier.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
Guid guid { get; }
```

Property Value

Type: [Guid](#)

The unique identifier.

See Also

[*IScriptJobActivity* Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobActivity.instruction Property

Instructions for executing the Activity is presented on the control that shows or initiates the Activity.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string instruction { get; set; }
```

Property Value

Type: [String](#)

The instruction.

See Also

[*IScriptJobActivity Interface*](#)

[*SchneiderElectric.Scripting.Types.JobList Namespace*](#)

IScriptJobActivity.parent_job_guid Property

Retrieves the Guid of the parent job.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
Guid parent_job_guid { get; }
```

Property Value

Type: [Guid](#)

The parent job unique identifier.

See Also

[IScriptJobActivity Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobActivity.title Property

A descriptive title of the Activity that is presented to the user as short text.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string title { get; set; }
```

Property Value

Type: [String](#)

The title.

IScriptJobComment Interface

Represents a comment entry in a job.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptJobComment
```

The **IScriptJobComment** type exposes the following members.

Properties

	Name	Description
	IScriptJobComment.date Property	Retrieves or sets the date.
	IScriptJobComment.guid Property	Retrieves the unique identifier ob this job.
	IScriptJobComment.text Property	Retrieves or sets the comment text.
	IScriptJobComment.user_name Property	Retrieves or sets the user name.

Methods

	Name	Description
	IScriptJobComment.remove Method	Removes this comment entry from the job.

See Also

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobComment.IScriptJobComment Properties

The [IScriptJobComment](#) type exposes the following members.

Properties

	Name	Description
	date	Retrieves or sets the date.
	guid	Retrieves the unique identifier of this job.
	text	Retrieves or sets the comment text.
	user_name	Retrieves or sets the user name.

Creates a new comment. commit is attached to the job.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
IScriptJobComment create(  
    string comment  
)
```

Parameters

comment

Type: [System.String](#)

The comment.

Return Value

Type: [IScriptJobComment](#)

The comment

See Also

[IScriptJobComments Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobList Interface

Provides access to jobs.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public interface IScriptJobList
```

The **IScriptJobList** type exposes the following members.

Properties

	Name	Description
	IScriptJobList.all Property	Retrieves all jobs.

Methods

	Name	Description
	IScriptJobList.by_assigned_to Method	Retrieve all jobs of specified "assigned to".
	IScriptJobList.by_contains_tag Method	Retrieve all jobs with specified tag.
	IScriptJobList.by_id Method	Retrieve job by specified job guid.
	IScriptJobList.by_issuer Method	Retrieve all jobs of specified issuer.
	IScriptJobList.by_state Method	Retrieve all jobs with specified job state.
	IScriptJobList.by_type Method	Retrieve all jobs with specified job type.
	IScriptJobList.by_urGENCY Method	Retrieve all jobs with specified job urgency.

 IScriptJobList.create Method	Creates a new job. Job is not automatically added. <code>job.commit()</code> must be called.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
string[] all { get; }
```

Property Value

Type: [String\[\]](#)

All tags.

See Also

[*IScriptJobTags Interface*](#)

[*SchneiderElectric.Scripting.Types.JobList Namespace*](#)

IScriptJobTags.IScriptJobTags Methods

The [IScriptJobTags](#) type exposes the following members.

Methods

	Name	Description
	add	Adds the specified tag.
	contains	Determines whether the job contains the specified tag.
	remove	Removes the specified tag.

See Also

[IScriptJobTags Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobTags.add Method

Adds the specified tag.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in
Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void add(  
    string tag  
)
```

Parameters

tag

Type: [System.String](#)

The tag.

See Also

[IScriptJobTags Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobTags.contains Method

Determines whether the job contains the specified tag.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
bool contains(  
    string tag  
)
```

Parameters

tag

Type: [System.String](#)

The tag.

Return Value

Type: [Boolean](#)

TRUE if tag is found otherwise FALSE.

See Also

[IScriptJobTags Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

IScriptJobTags.remove Method

Removes the specified tag.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
void remove(  
            string tag  
)
```

Parameters

tag

Type: [System.String](#)

The tag.

See Also

[IScriptJobTags Interface](#)

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

JobModificationActions Enumeration

Type definition fo modification actions of jobs.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public enum JobModificationActions
```

Members

Member name	Value	Description
submit	0	A submit action.
open	1	An open action.
modify	2	A modify action.
close	3	A close action.

See Also

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

JobStates Enumeration

The states that a job can be assigned.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public enum JobStates
```

Members

Member name	Value	Description
open	0	The Job is open.
in_progress	1	The Job is in progress.
closed	2	The Job is closed.

See Also

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

JobTypes Enumeration

The Type which is assigned to a Job.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public enum JobTypes
```

Members

Member name	Value	Description
information	0	The letter i with a blue circle in the background.
question	1	A questionmark with a blue circle in the background.
warning	2	A exclamation point on a yellow triangle.
error	3	A white cross on a red octagon.

See Also

[SchneiderElectric.Scripting.Types.JobList Namespace](#)

JobUrgencies Enumeration

Represents the job urgency.

Namespace: [SchneiderElectric.Scripting.Types.JobList](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public enum JobUrgencies
```

Members

	Member name	Value	Description
	low	0	The Job is insignificant.
	normal	1	The Job is of normal importance.
	high	2	The Job is important.

Chapter 17

SchneiderElectric.Scripting.Types.LibraryPackage Namespace

This namespace provides types that allow access to the Library-Package service.

Classes

	Class	Description
	LibraryPackageApi Class	Class provides the functionality to create and install Library-Packages.

LibraryPackageApi Class

Class provides the functionality to create and install Library-Packages.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.LibraryPackage.LibraryPackageApi

Namespace: [Chapter 17 SchneiderElectric.Scripting.Types.LibraryPackage](#)

[Namespace](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public sealed class LibraryPackageApi
```

The **LibraryPackageApi** type exposes the following members.

Methods

	Name	Description
	LibraryPackageApi.create_library_package Method	Creates a library package at the specified location.
	LibraryPackageApi.install_library_package Method	Loads the specified library-package and installs all contained libraries into the repository.

See Also

[SchneiderElectric.Scripting.Types.LibraryPackage Namespace](#)

LibraryPackageApi.LibraryPackageApi Methods

The [LibraryPackageApi](#) type exposes the following members.

Methods

	Name	Description
	create_library_package	Creates a library package at the specified location.
	install_library_package	Loads the specified library-package and installs all contained libraries into the repository.

See Also

[LibraryPackageApi Class](#)

[SchneiderElectric.Scripting.Types.LibraryPackage Namespace](#)

LibraryPackageApi.create_library_package Method

Creates a library package at the specified location.

Namespace: [SchneiderElectric.Scripting.Types.LibraryPackage](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void create_library_package (
    string filePath,
    IEnumerable<IManagedLib> libraries
)
```

Parameters

filePath

Type: [System.String](#)

The path where the library-package will be created.

libraries

Type: [System.Collections.Generic.IEnumerable\(IManagedLib\)](#)

The libraries to include in the package.

Exceptions

Exception	Condition
ArgumentException	filePath is null or empty.
ArgumentNullException	libraries is null.

Examples

This example shows how to retrieve a set of libraries from the Library Manager and create a library package from them.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

# We get all versions of the PacDriveLib
# Precondition: Have a testproject with those libs installed
all_libraries = librarymanager.get_all_libraries(False)
pacdrivelibs = [i for i in all_libraries if i.title ==
"PD_PacDriveLib"]

# We print everything just to know what's going on.
for lib in pacdrivelibs:
    print("Found: ", lib.displayname)

# define the output path for the library package
library_package_path = r"d:\Python\pacdrive.librarypackage"

# We create a library-package at the defined location.
# The package contains all versions of the PacDriveLib
librarypackage_service.create_library_package(library_package_path,
pacdrivelibs)

print("library package created in " + library_package_path)
```

See Also

[LibraryPackageApi Class](#)

[SchneiderElectric.Scripting.Types.LibraryPackage Namespace](#)

LibraryPackageApi.install_library_package Method

Loads the specified library-package and installs all contained libraries into the repository.

Namespace: [SchneiderElectric.Scripting.Types.LibraryPackage](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void install_library_package (
    string filePath,
    bool overwrite = false
)
```

Parameters

filePath

Type: [System.String](#)

Path to the library-package file containing the libraries to install.

overwrite (Optional)

Type: [System.Boolean](#)

If set to true, existing libraries are replaced. This parameter is optional, the default value is false.

Exceptions

Exception	Condition
ArgumentException	filePath is null or empty.
InvalidOperationException	No library repository available.

Examples

This example shows how to install an existing library package to the system.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

# define the path to the library package that should be installed
library_package_path = r"d:\Python\pacdrive.librarypackage"

# We install the package to the system
librarypackage_service.install_library_package(library_package_path,
False)

print("library package " + " installed")
```

Chapter 18

SchneiderElectric.Scripting.Types.NewProject Namespace

This namespace contains types and methods to create new projects from Schneider Electric templates.

Classes

	Class	Description
	CommonProjectSettings Class	Common project settings for the new project.
	CompilerMessage Class	Data structure for a compiler message.
	ControllerSettings Class	Data structure for controller settings for the new project.
	NewProjectType Class	This type contains methods for creating new projects.

Enumerations

	Enumeration	Description
	ImplementationLanguage Enumeration	Implementation objects for the project wizard script driver.

CommonProjectSettings Class

Common project settings for the new project.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.NewProject.CommonProjectSettings

Namespace: [Chapter 18 SchneiderElectric.Scripting.Types.NewProject Namespace](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class CommonProjectSettings
```

The **CommonProjectSettings** type exposes the following members.

Properties

	Name	Description
	CommonProjectSettings.author Property	The author who creates the project.
	CommonProjectSettings.company Property	The company which created the project.
	CommonProjectSettings.customer Property	The customer which created the project.
	CommonProjectSettings.description Property	Project description.
	CommonProjectSettings.machine_name Property	Specifies the machine name.
	CommonProjectSettings.picture Property	The path to a project picture.

 <u>CommonProjectSettings.project_name Property</u>	The name of the project.
 <u>CommonProjectSettings.project_path Property</u>	The path where the project should be stored.
 <u>CommonProjectSettings.project_type Property</u>	The type of the project.

See Also

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.CommonProjectSettings Properties

The [CommonProjectSettings](#) type exposes the following members.

Properties

	Name	Description
	author	The author who creates the project.
	company	The company which created the project.
	customer	The customer which created the project.
	description	Project description.
	machine_name	Specifies the machine name.
	picture	The path to a project picture.
	project_name	The name of the project.
	project_path	The path where the project should be stored.
	project_type	The type of the project.

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.author Property

The author who creates the project.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string author { get; set; }
```

Property Value

Type: [String](#)

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.company Property

The company which created the project.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string company { get; set; }
```

Property Value

Type: [String](#)

Remarks

Company and customer are the same in this Python API.

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.customer Property

The customer which created the project.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string customer { get; set; }
```

Property Value

Type: [String](#)

Remarks

Company and customer are the same in this Python API.

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.description Property

Project description.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string description { get; set; }
```

Property Value

Type: [String](#)

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.machine_name Property

Property specifies the machine name.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string machine_name { get; set; }
```

Property Value

Type: [String](#)

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.picture Property

The path to a project picture.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string picture { get; set; }
```

Property Value

Type: [String](#)

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.project_name Property

The name of the project.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string project_name { get; set; }
```

Property Value

Type: [String](#)

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.project_path Property

The path where the project should be stored.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string project_path { get; set; }
```

Property Value

Type: [String](#)

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CommonProjectSettings.project_type Property

The type of the project.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public ProjectTypes project_type { get; set; }
```

Property Value

Type: ProjectTypes

Remarks

Possible project types are:

- EDESIGN_Project
- StandardProject
- EmptyProject
- Library

See Also

[CommonProjectSettings Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CompilerMessage Class

Data structure for a compiler message.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.NewProject.CompilerMessage

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class CompilerMessage
```

The **CompilerMessage** type exposes the following members.

Properties

	Name	Description
	CompilerMessage.Severity Property	Severity of the compiler message.
	CompilerMessage.Text Property	The compiler message.

See Also

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CompilerMessage.CompilerMessage Properties

The [CompilerMessage](#) type exposes the following members.

Properties

	Name	Description
	Severity	Severity of the compiler message.
	Text	The compiler message.

See Also

[CompilerMessage Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CompilerMessage.Severity Property

Severity of the compiler message.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string Severity { get; set; }
```

Property Value

Type: [String](#)

See Also

[CompilerMessage Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

CompilerMessage.Text Property

The compiler message.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string Text { get; set; }
```

Property Value

Type: [String](#)

See Also

[CompilerMessage Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

ControllerSettings Class

Data structure for controller settings for the new project.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.NewProject.ControllerSettings

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class ControllerSettings
```

The **ControllerSettings** type exposes the following members.

Properties

	Name	Description
	ControllerSettings.device_name Property	Device Name.
	ControllerSettings.id Property	Device description ID.
	ControllerSettings.implementation_language Property	Programming language.
	ControllerSettings.type Property	Device description type.
	ControllerSettings.version Property	Device description version.

See Also

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

ControllerSettings.ControllerSettings Properties

The [ControllerSettings](#) type exposes the following members.

Properties

	Name	Description
	device_name	Device Name.
	id	Device description ID.
	implementation_language	Programming language.
	type	Device description type.
	version	Device description version.

NewProjectType Class

This type contains methods for creating new projects.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.NewProject.NewProjectType

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class NewProjectType
```

The **NewProjectType** type exposes the following members.

Methods

	Name	Description
	NewProjectType.clean_application Method	Cleans the application. Raises an exception if clean is unsuccessful.
	NewProjectType.compile_application Method	Compiles the application.
	NewProjectType.create_common_project_settings Method	Creates a new instance of the common project settings DTO which can be used to create a new project.
	NewProjectType.create_controller_settings Method	Creates a new instance of the controller settings DTO.

	<u>NewProjectType.create_project Method</u>	Creates a new project with the given settings.
---	---	--

NewProjectType.NewProjectType Methods

The [NewProjectType](#) type exposes the following members.

Methods

	Name	Description
	clean_application	Cleans the application. Raises an exception if clean is unsuccessful.
	compile_application	Compiles the application.
	create_common_project_settings	Creates a new instance of the common project settings DTO which can be used to create a new project.
	create_controller_settings	Creates a new instance of the controller settings DTO.
	create_project	Creates a new project with the given settings.

See Also

[NewProjectType Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

NewProjectType.clean_application Method

Cleans the application. Raises an exception if clean is unsuccessful.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void clean_application(  
    IExtendedObject<IScriptObject> application  
)
```

Parameters

application

Type: IExtendedObject(IScriptObject)

The application to clean

Examples

This example shows how to clean the application.

Python

```
# We enable the new Python 3 print syntax  
from __future__ import print_function  
  
# The path to our project  
project_path = r"D:\PythonProjects\Example.project"  
  
# Clean up any open project:  
if projects.primary:  
    projects.primary.close()
```

```
# Load the project
proj = projects.open(project_path);

# Set the project as primary project
proj = projects.primary

# We fetch the active application.
app = proj.active_application

# Clean application
new_project.clean_application(app)
```

See Also

[NewProjectType Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

NewProjectType.compile_application Method

Compiles the application.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public List<CompilerMessage> compile_application(
    IExtendedObject<IScriptObject> application
)
```

Parameters

application

Type: IExtendedObject(IScriptObject)

The application to compile.

Return Value

Type: [List\(CompilerMessage\)](#)

List of errors or null if no errors occurred.

Examples

This example shows how to compile the application.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

# The path to our project
```

```
project_path = r"D:\PythonProjects\Example.project"

# Clean up any open project:
if projects.primary:
    projects.primary.close()

# Load the project
proj = projects.open(project_path);

# Set the project as primary project
proj = projects.primary

# We fetch the active application.
app = proj.active_application

# Clean application
new_project.clean_application(app)

# Compile application and store compiler messages in a list
messages = new_project.compile_application(app)

# If messages == None the build was successful
if len(messages) == 0:
    print("--- Build successful ---")
# Otherwise print results
else:
    for i in messages:
        # If severity == 'Script Engine Exception' the plugin
        # caused an exception.
        # The text describes the exception details.
        print(i.Severity, i.Text)
```

NewProjectType.create_controller_settings Method

Creates a new instance of the controller settings DTO.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public ControllerSettings create_controller_settings()
```

Return Value

Type: [ControllerSettings](#)

A new instance of the controller settings DTO.

See Also

[NewProjectType Class](#)

[SchneiderElectric.Scripting.Types.NewProject Namespace](#)

NewProjectType.create_project Method

Creates a new project with the given settings.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void create_project(  
    CommonProjectSettings commonProjectSettings,  
    ControllerSettings controllerSettings  
)
```

Parameters

commonProjectSettings

Type: [SchneiderElectric.Scripting.Types.NewProject.CommonProjectSettings](#)

Needs an instance of common project settings.

controllerSettings

Type: [SchneiderElectric.Scripting.Types.NewProject.ControllerSettings](#)

Needs an instance of controller settings.

Examples

This example shows how to create a standard project.

Python

```
# Clean up any open project:  
if projects.primary:  
    projects.primary.close()
```

```
# Create a new instance of the common project settings object

ImplementationLanguage Enumeration

Implementation objects for the project wizard script driver.

Namespace: [SchneiderElectric.Scripting.Types.NewProject](#)

Assembly: SchneiderElectric.Programming.Scripting.plugin (in SchneiderElectric.Programming.Scripting.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public enum ImplementationLanguage
```

Members

Member name	Value	Description
continuous_function_chart	0	Continuous Function Chart (CFC)
function_block_diagram	1	Function Block Diagram (FBD)
instruction_list	2	Instruction List (IL)
ladder_logic_diagram	3	Ladder Logic Diagram (LD)
sequential_function_chart	4	Sequential Function Chart (SFC)
structured_text	5	Structured Text (ST)

Chapter 19

SchneiderElectric.Scripting.Types.Options Namespace

This namespace provides types that allow access to the options and feature settings.

Classes

	Class	Description
	FeatureSettings Class	Class provides the functionality enable or disable of specific features in the platform. Click on the members to show some examples.

FeatureSettings Class

Class provides the functionality enable or disable of specific features in the platform.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.Options.FeatureSettings

Namespace: [Chapter 19 SchneiderElectric.Scripting.Types.Options Namespace](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public sealed class FeatureSettings
```

The **FeatureSettings** type exposes the following members.

Methods

	Name	Description
	FeatureSettings.get_feature_setting_value Method	Verifies if a specific feature is enabled.
	FeatureSettings.set_feature_setting_value Method	Enables or disables a specific feature.

See Also

[SchneiderElectric.Scripting.Types.Options Namespace](#)

FeatureSettings.FeatureSettings Methods

The [FeatureSettings](#) type exposes the following members.

Methods

	Name	Description
	get_feature_setting_value	Verifies if a specific feature is enabled.
	set_feature_setting_value	Enables or disables a specific feature.

[SchneiderElectric.Scripting.Types.Options Namespace](#)

FeatureSettings.get_feature_setting_value Method

Verifies if a specific feature is enabled.

Namespace: [SchneiderElectric.Scripting.Types.Options](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public bool get_feature_setting_value(
    string groupId,
    string featureId,
    bool defaultValue
)
```

Parameters

groupId

Type: [System.String](#)

The group identifier.

featureId

Type: [System.String](#)

The feature identifier.

defaultValue

Type: [System.Boolean](#)

If the requested feature is not present, this default value will be returned.

Return Value

Type: [Boolean](#)

`true` if the requested feature is enabled; otherwise `false`

See Also

[*SchneiderElectric.Scripting.Types Namespace*](#)

FeatureSettings.set_feature_setting_value Method

Enables or disables a specific feature.

Namespace: [SchneiderElectric.Scripting.Types.Options](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public void set_feature_setting_value(
    string groupId,
    string featureId,
    bool value
)
```

Parameters

groupId

Type: [System.String](#)

The group identifier.

featureId

Type: [System.String](#)

The feature identifier.

value

Type: [System.Boolean](#)

Specifies if the feature should be enabled (`true`) or disabled (`false`).

Chapter 20

SchneiderElectric.Scripting.Types.Visualization Namespace

This namespace provides types that allow access to the visualization settings.

Classes

	Class	Description
	VisualizationSettings Class	Class provides the functionality to show and modify the visualization settings. Click on the members to show some examples.

VisualizationSettings Class

Class provides the functionality to show and modify the visualization settings.

Inheritance Hierarchy

[System.Object](#)

SchneiderElectric.Scripting.Types.Visualization.VisualizationSettings

Namespace: [Chapter 20 SchneiderElectric.Scripting.Types.Visualization Namespace](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public class VisualizationSettings
```

The **VisualizationSettings** type exposes the following members.

Properties

	Name	Description
	VisualizationSettings.active_profile_name Property	Retrieves or sets the name of the active profile. The name is the directory name of a profile stored in visual elements repository.

Methods

	Name	Description
	VisualizationSettings.get_all_visual_profile_names Method	Retrieves all visual profile names.

See Also

VisualizationSettings.VisualizationSettings Properties

The [VisualizationSettings](#) type exposes the following members.

Properties

	Name	Description
	active_profile_name	Retrieves or sets the name of the active profile. The name is the directory name of a profile stored in visual elements repository.

See Also

[VisualizationSettings Class](#)

[SchneiderElectric.Scripting.Types.Visualization Namespace](#)

VisualizationSettings.active_profile_name Property

Retrieves or sets the name of the active profile. The name is the directory name of a profile stored in visual elements repository.

Namespace: [SchneiderElectric.Scripting.Types.Visualization](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string active_profile_name { get; set; }
```

Property Value

Type: [String](#)

The name of the active profile.

Examples

This example shows how to use the active_profile_name property to set or get the current visualization profile.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

proj = projects.primary

# Print the active profile
print("Current visual profile: " +
      visualization_settings.active_profile_name)

# Retrieve all available visualization profiles
profile_names =
      visualization_settings.get_all_visual_profile_names()

# Print the profiles
```

```
for visual_profile in profile_names:  
    print (" - " + visual_profile)  
  
# Set the profile to V1.35.12.0  
visualization_settings.active_profile_name = "V1.35.20.0"  
  
# Get the active profile  
profile_name = visualization_settings.active_profile_name  
  
# Print the active profile  
print("New visual profile: " + profile_name)  
  
# Save project  
projects.primary.save()
```

[VisualizationSettings Class](#)

[SchneiderElectric.Scripting.Types.Visualization Namespace](#)

VisualizationSettings.get_all_visual_profile_names Method

Retrieves all visual profile names.

Namespace: [SchneiderElectric.Scripting.Types.Visualization](#)

Assembly: Elau.Epas5.ScriptDriver.plugin (in

Elau.Epas5.ScriptDriver.plugin.dll) Version: Version 1.0-dev (developer build)

Syntax

C#

```
public string[] get_all_visual_profile_names()
```

Return Value

Type: [String\[\]](#)

A list of available profile names.

Examples

This example shows how to retrieve all visual profiles.

Python

```
# We enable the new Python 3 print syntax
from __future__ import print_function

proj = projects.primary

# Get current visualization profile
profile_name = visualization_settings.active_profile_name

# Print current visualization profile
print("Current visual profile: " + profile_name)

# Retrieve all available visualization profiles
profile_names =
visualization_settings.get_all_visual_profile_names()

# Print the profiles
```

```
for visual_profile in profile_names:  
    print (" - " + visual_profile)  
  
# Save project  
projects.primary.save()
```
